Upazila Disaster Risk Reduction Action Plan (UzDRRAP)

Chilmari, Kurigram

June 2025

**Upazila Disaster Management Committee
(UzDMC), Chilmari, Kurigram**

*UzDRRAP Formulated by the Department of Disaster Management (DDM) and
Technical Assistance from the JICA Expert Team (JET) of “The Project for Capacity Enhancement on
Formulation and Implementation of Local Disaster Risk Reduction Plan”.*

Preface

Bangladesh is one of the most disaster-prone countries in the world due to its geographical location. The frequency and intensity of disasters have increased in recent years due to climate change, as floods and storm surges are likely to become more severe with increases in intense tropical cyclones. Also, geographically, the country is located close to active seismic zones and is susceptible to medium to large earthquakes. These disasters cause not only direct physical damage to lives and assets, but also indirect and consequent losses to various sectors such as the agricultural sector, food security, water, health and sanitation, significantly impacting the economy and livelihood of the local communities. To tackle the situation, the government has achieved breakthroughs in disaster risk management by mentioning this as one of the top priorities, as described in the 8th Five-Year Plan (July 2020- June 2025), “a sustainable development pathway resilient to disaster and climate change” as a core theme.

In order to accelerate the disaster resilience of the country, it is vital to develop and implement local disaster risk reduction strategies and plans, as also indicated in the Sendai Framework for Disaster Risk Reduction 2025-2030. Expectedly, by adopting a local disaster risk reduction plan in every Upazila, it is possible to effectively reduce the damage and loss caused by disaster, and enhance continuous and sustainable development of the country’s economy, and therefore achieve Vision 2041 of the government.

In light of this, “The Project for Capacity Enhancement on Formulation and Implementation of Local Disaster Risk Reduction Plan” has been implemented since December 2020, led by MoDMR and DDM, supported by the Japan International Cooperation Agency (JICA). In this Project, Upazila Disaster Risk Reduction Action Plans have been formulated in six pilot Upazilas of three districts, which are Cox’s Bazar (Cox’s Bazar Sadar and Chakria), Sunamganj (Chhatak and Jagannathpur), and Kurigram (Chilmari and Ulipur). These plans have been developed by unique approaches that are 1) Scientific analysis for local hazards; 2) Setting DRR targets based on risk quantification; 3) Involvement of project implementing agencies including BWDB, LGED, SoB, GSB, BMD, PWD, FSCD, and so on. These approaches have successfully established this effective plan and promote the execution of the projects to reduce disaster risk.

This plan is expected to save lives, livelihoods, and resources of the Upazila, as well as pave the way for enhancing future development through disaster risk reduction in the country.

Director General

Department Of
Disaster Management

Message

Bangladesh is the 7th most vulnerable country to climate change according to Global Climate Risk Index (CRI) ranks published by German watches. Accordingly, people in Bangladesh are often affected by number of natural disasters like cyclone, storm surges, floods, riverbank erosion, drought, salinity intrusion, cold wave and thunderstorm etc. The Government of Bangladesh (GoB) recognizes these risks as significant detriment to the growth prospects of the country and has taken several measures over the decades.

Bangladesh made its policies and strategies for disaster risk management following principles of the SFDRR (Sendai Framework for Disaster Risk Reduction) since the adoption of the framework in March 2015. Over time, the GoB has shifted its focus from conventional response and relief approach to a more proactive comprehensive risk reduction approach in order to make our common people more resilient. In light of SFDRR, the Ministry of Disaster Management and Relief (MoDMR) has taken a pilot project in a titled “The Project for Capacity Enhancement on Formulation and Implementation of Local Disaster Risk Reduction Plan - LDRRP” with the financial and technical support of JICA. This project is being piloted six Upazilas in three different geographical locations of Cox's Bazar (Cox's Bazar Sadar & Chakaria), Sunamganj (Chhatak & Jagannathpur) and Kurigram (Chilmari & Ulipur) respectively.

I expressed my cordial thanks to JICA Expert Team (JET) including development partners “GPAD” (Geo Planning for Advanced Development) for their diligent efforts to prepare this Upazila Disaster Risk Reduction Action Plan (UzDRRAP) engaging members of UDMC, UzDMC and relevant govt. agencies. I hope that the said plans will play a vital role for reducing disaster risk in the pilot Upazilas and later be expanded across the country.

Planning & Development
Department Of Disaster Management

Bangladesh is one of the most vulnerable countries to natural disasters due to its geographical location, and socio-economic condition. The geographical location, land characteristics, multiplicity of rivers and the monsoon climate render Bangladesh highly vulnerable to natural hazards. Bangladesh is a riverine country with numerous rivers, and the three major ones flowing over its 147570 square kilometers of surface area are the Ganges, the Brahmaputra, and the Meghna. Due to climate change, natural disasters are hitting Bangladesh on a massive scale every year, which is regularly holding back Bangladesh's progress. A disaster is a serious disruption of human lives including socio-economic strata and environmental degradation causes long term effects and impacts, which exceeds the ability of the affected community or society to cope using its own resources.

In this consequence in the light of Sendai Framework for Disaster Risk Reduction (SFDRR), the Ministry of Disaster Management and Relief (MoDMR) has taken a pilot project named "The Project for Capacity Enhancement on Formulation and Implementation of Local Disaster Risk Reduction Plan - LDRRP" with the financial and technical support of JICA is being piloting in six Upazilas of three pilot districts namely Cox's Bazar, Sunamganj & Kurigram considering local hazards in different geographical location. The Bangladesh Government has also emphasized on proactive Disaster Risk Management (DRM) instead of Post Disaster Response (PDR). Our belief is that formulation of Upazila Disaster Risk Reduction Action Plan (UzDRRAP) is a fundamental need for the Upazilas in order to reduce the rate of damage and loss through early response. This plan will take us on the path of prosperity by reducing the risk of disasters and will play a significant role in the development of the country.

I expressed my cordial thanks to the members of Union Disaster Management Committee (UDMC), Upazila/District Disaster Management Committee (Uz/DDMC), govt. agencies/departments and other stakeholders for their active participation in respect to invested time & ideas in the whole process during formulation of UzDRRAPs. I also expressed my heartiest thanks to JICA Expert Team (JET) and Sub-Consultant "Geo planning for Advanced Development (GPAD)" for their relentless efforts to prepare this UzDRRAP.

Md. Abdullah Al-Mamun
(Joint Secretary)

Deputy Commissioner

Kurigram District

Message

Kurigram is located in the northern region of Bangladesh along the border with India. The district is bordered by Jamalpur district of Mymensingh division to the south, Gaibandha, Rangpur and Lalmonirhat districts as well as West Bengal state of India to the West, and the Indian states of Assam and Meghalaya to the East. The area of this district is 2245.04 square kilometers where 278.28 kilometers of international border with India. It consists of 09 Upazilas (Ulipur, Chilmari, Roumari, Nageshwari, Bhurungamari and Phulbari, Kurigram Sadar, Nageshwari, Bhurungamari, Rajarhat, Ulipur, Chilmari, Phulbari, Roumari & Rajibpur and 03 Pourashavas (Municipality) & 73 Unions with 1872 villages. Kurigram District Town stands on the Bank of the Dharla River. There are some prominent rivers exists in this district, these are Brhammaputra, Tista, Dharala, Dhukumar, Fulkumar, Jingiram, Sonavori, Holholia, Kalzani and Sankosh etc.

The district faces annual flooding due to water from upstream areas, as well as riverbank erosion both of which significant hazards. These natural disasters result in the loss of standing crops, valuable property, and even homes, posing a major threat to people's lives and livelihoods. As a result, the progress of development work is often slowed. In light of this, the formulation of Upazila Disaster Risk Reduction Plan (UzDRRP) has become a timely and essential action.

I am pleased to learn that the Upazila Disaster Risk Reduction Action Plan (UzDRRAP) is being implemented on a pilot basis in the Ulipur and Chilmari Upazilas of Kurigram district, through joint collaboration of JICA and the Bangladesh Government. It is expected that this action plan will play a crucial role in reducing the loss and damage caused by natural disasters, while accelerating development efforts in the future.

A handwritten signature in black ink, appearing to read "Nusrat Sultana".

Nusrat Sultana

Upazila Nirbahi Officer
Chilmari, Kurigram District

Message

Chilmari Upazila is located in the northern part of Bangladesh and consists of six unions under Kurigram district located in the northern part of Bangladesh. The area is 224.97 sq. km, which is vulnerable to natural disasters, resulting in a very high poverty rate. This Upazila is affected by floods and riverbank erosion almost every year, causing extensive damage to standing crops, assets, infrastructures, and settlements, resulting in poverty as a daily companion. Due to these natural calamities, people's normal lives have also suffered a lot. Chilmari Upazila is a river-dwelling area where the road communication system is still not as developed as expected. There are many chars under this Upazila where people are deprived of fundamental/basic civic amenities, and even the communication system is very poor or to, some extent, absent. Henceforth, sustainable infrastructure development is not taking place here, which is a massive waste of the country's resources.

Moreover, every year due to floods and riverbank erosion, the earthen roads are broken and washed out, and even the Brick Flat Soling (BFS), Herring Bone Bond (HBB) and paved roads are also damaged, so sustainable development is far away from expectation. The inhabitants of this Upazila lose their lives and valuable assets, so financial prosperity never comes, resulting in socio-economic development being hampered. On the other hand, migration is one of the major problems of this area as there are no industries and earning sources for the employment generation of the mass people.

In this context, JICA comes forward with "The Project for Capacity Enhancement on Formulation and Implementation of Local Disaster Risk Reduction Plan-LDRRP", and is piloting this project in Chilmari Upazila, which is a timely step. It's my sincere thanks and gratitude to all those who were involved in the process of this Upazila Disaster Risk Reduction Action Plan (UzDRRAP) formulation. It is expected that this UzDRRAP will play a vital role in reducing the loss and damage caused by the natural disasters in the coming days, resulting in the restoration of lives and livelihoods of inhabitants.

Chapter-1. Introduction

1.1 Purpose and aim of the Plan

The purpose of the Chilmari Upazila Disaster Risk Reduction Action Plan (UzDRRAP) is to identify necessary countermeasures against natural disasters and implement them in cooperation with relevant stakeholders to reduce disaster risks in the Upazila. This Plan contributes to increasing investment in disaster risk reduction by ensuring a mechanism for project implementation of the line ministries' countermeasures and by promoting further funding from agencies.

1.2 Rationale for the formulation of the Plan

This Plan corresponds to the Risk Reduction Action Plan (RRAP) that is required to be developed as a part of the Disaster Risk Management Plan (DRMP) by Disaster Management Committees (DMC) at District, Upazila, and Union DMCs, according to the Standing Orders on Disaster 2019 (SOD). In the SOD, it is recommended to prepare RRAP by local DMCs, as well as the Contingency Plan. While disaster response, which is covered by the Contingency Plan, has been relatively conducted as required in emergencies, risk reduction measures based on the objective hazard and risk assessment had not been sufficiently implemented at the Upazila level. In consideration of this situation and the importance of the DRR investment for the further development of the country, this plan, therefore, emphasises disaster risk reduction and proposes the necessary actions as a master plan corresponding to the RRAP of the Upazila Disaster Management Plan (UzDMP), which directly leads to the preparation of Development Project Proposals (DPPs) and Annual Development Programmes (ADPs).

Figure 1-1. Risk Reduction Action Plan in the SOD

The formulation of the UzDRRAP and the implementation of the countermeasure against disasters are in line with the government strategies, policies, and plans of the country, as listed below.

- The Bangladesh Delta Plan 2100 mentions the importance of strengthening the disaster risk management and combating the effects of climate change.
- 8th Five-Year Plan (July 2020-June 2025) emphasizes appropriate policy and institutional capacity building to address their concerns on climate-resilient development and disaster management at all levels of the government, especially at the local government level where most of the programmes are to be implemented.

- The National Plan for Disaster Management (NPDM 2021-2025) focuses on "Making disaster risk reduction a development practice to achieve resilient public investment and the SDGs" and "Building capacity and leadership to implement NPDM 2021-2025 at the national and local level".

In addition, from an international perspective, this plan directly contributes to the Sendai Framework for Disaster Risk Reduction 2015-2030 (SFDRR), specifically the Target (e) “To substantially increase the number of countries with national and local disaster risk reduction strategy”.

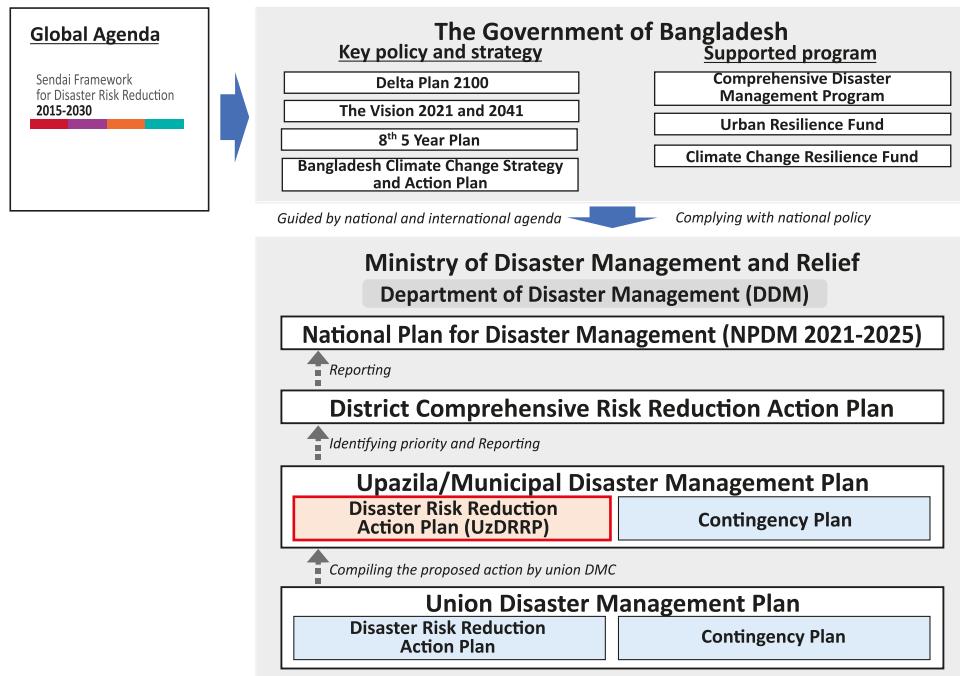

Figure 1-2. Relationship between national key policies and this plan

1.3 Relevance to other Upazila plans

Based on the Local Government (Upazila Parishad and Upazila Administration Reorganization) Act 1998 and the Local Government (Upazila Parishad) Act 2009, each Upazila shall prepare a development plan and land use plan. This plan and the proposed countermeasure against the disasters have been considered to ensure consistency with these plans in this Upazila.

1.4 Features of the Planning

The features of this Planning are 1) Scientific Analysis for Local Hazards, 2) Setting DRR Target based on Risk Quantification, and 3) Involvement of Project Implementing Agencies, which are expected to contribute to the actual execution of the effective countermeasures.

Feature 1: Scientific Analysis for Local Hazards:

The hazard maps were developed by simplified technical analysis, which processes are not adopted in the Community Risk Assessment (CRA), using observed disaster records of rainfall and tidal level, the Digital Elevation Model (DEM), and current hazard maps. The developed hazard maps represent the vulnerable areas of the Upazila and help promote to objective understanding of the hazard potential.

Feature 2: Setting DRR Targets based on Risk Quantification:

Risks in this Upazila were quantified based on risk quantification using hazard maps and various factors such as natural conditions and socio-economic factors, and visualized to share with relevant agencies. A DRR target was set in consideration of the result of identifying which areas are highly affected by potential hazards, by these risk quantifications, as well as the current policies of the line ministries (project implementing agencies).

Feature 3: Involvement of Project Implementing Agencies:

The Upazila Sub-Committee (UzSC), which is composed of the Upazila chairman, UNO, PIO, engineers from LGED, BWDB, and DPHE in the Upazila, Upazila officials, Union Parishad chairman, was established to identify disaster risks and consider priorities of countermeasures against the disasters at the Upazila level. Since the committee at the Upazila level does not have the authority to determine the countermeasures listed in the plan to be implemented, the members from the line ministries at the central level are involved in the planning processes to promote the schemes/projects listed in the UzDRRAP and secure budgets.

1.5 Methodology for the development of the Plan

1.5.1 Institutional Arrangement

For the development of this Plan, an UzSC, that is stipulated in the SOD, was established in this Upazila. The roles and responsibilities of this committee are to::

- 1) Prepare this UzDRRAP by identifying existing DPPs and pipeline projects related to DRR, Union Parishads' (UPs) priority, and some development projects that might affect people or increase disaster risk;
- 2) Summarize DRR projects by examining the needs of UPs and Risk Reduction Action Plans developed by UPs;
- 3) Identify possible DPPs to be able to collaborate among line ministries on structural and non-structural measures to maximize the efficiency and effectiveness of DRR.

In addition to this UzSC at the Upazila level, the Technical Sub Committee (TSC) was established to coordinate projects proposed by other Upazilas in addition to Chilmari Upazila at the central level. Implementation of the projects proposed in the UzDRRAP is determined by the line ministries at the central level. The roles and responsibilities of this TSC are to:

- 1) Summarize and monitor the progress of DRR-related projects based on the plans that UzSCs submitted;
- 2) Request the line ministries on the possibility of doing further investigation on DRR project needs based on the UzDRRAP;
- 3) Make efforts to integrate DRR ideas into DPP, ADP and 5YP in Upazila and line ministries, considering the disaster risk reduction target in the UzDRRAP;
- 4) Discuss among line ministries on development projects which might affect people or cause disasters;
- 5) Establish the guidelines and manuals to prepare UzDRRAPs
- 6) Take the initiative to start up UzSCs for the preparation of UzDRRAPs.

1.5.2 Planning Process and Methodology

This plan was established based on a combination of methods, namely JICA 8 steps and the CRA method which has been broadly utilized as a vulnerability assessment in the country, as shown in the figure below.

For developing each chapter of this plan, the following methodology was introduced.

Chapter 2: Geographic, Socio-economic, and Meteorological Conditions

This chapter illustrates the characteristics of the Upazila, that is the conditions to develop the Action plan for DRR. The statistics data including the Census 2022 and meteorological data were collected and analyzed.

Chapter 3: Hazard Characteristics and Disaster Risk

This chapter explains disaster records and experiences, target hazards, as well as hazard and disaster risks of the Upazila. While disaster records and experiences were mostly collected by the DRRO of the district and UzDMC members, hazard and disaster risks were identified through scientific analysis by utilizing data such as elevation data (DEM) probability rainfall data, land use data, and important public facilities. These hazard maps and risk assessment results were then confirmed in workshops where the UzDMC members participated.

Chapter 4: DRR Targets of the Upazila

This chapter describes Vision and Challenges by hazard. This Vision indicates the target that all the stakeholders intend to achieve in carrying out their projects defined in this Plan. Challenges by hazard show the short-to-mid-term and long-term countermeasures to be taken to achieve the Vision, which depends on the target areas, namely inland area, along river, and Char area.

Chapter 5: Action Plan of DRR Countermeasures

This chapter shows the current status of the general DRR countermeasures as well as the action plan in line with the DRR target. The current status of the countermeasures was identified and analyzed by consultation with UzDMC and UzSC members, while the Action Plan was developed in consideration of the risk assessment results, consultation by line ministries, and proposals given by the UzDMC members.

¹ The risk assessment was conducted in accordance with the developed guideline – Guideline on Hazard and Risk Assessment.

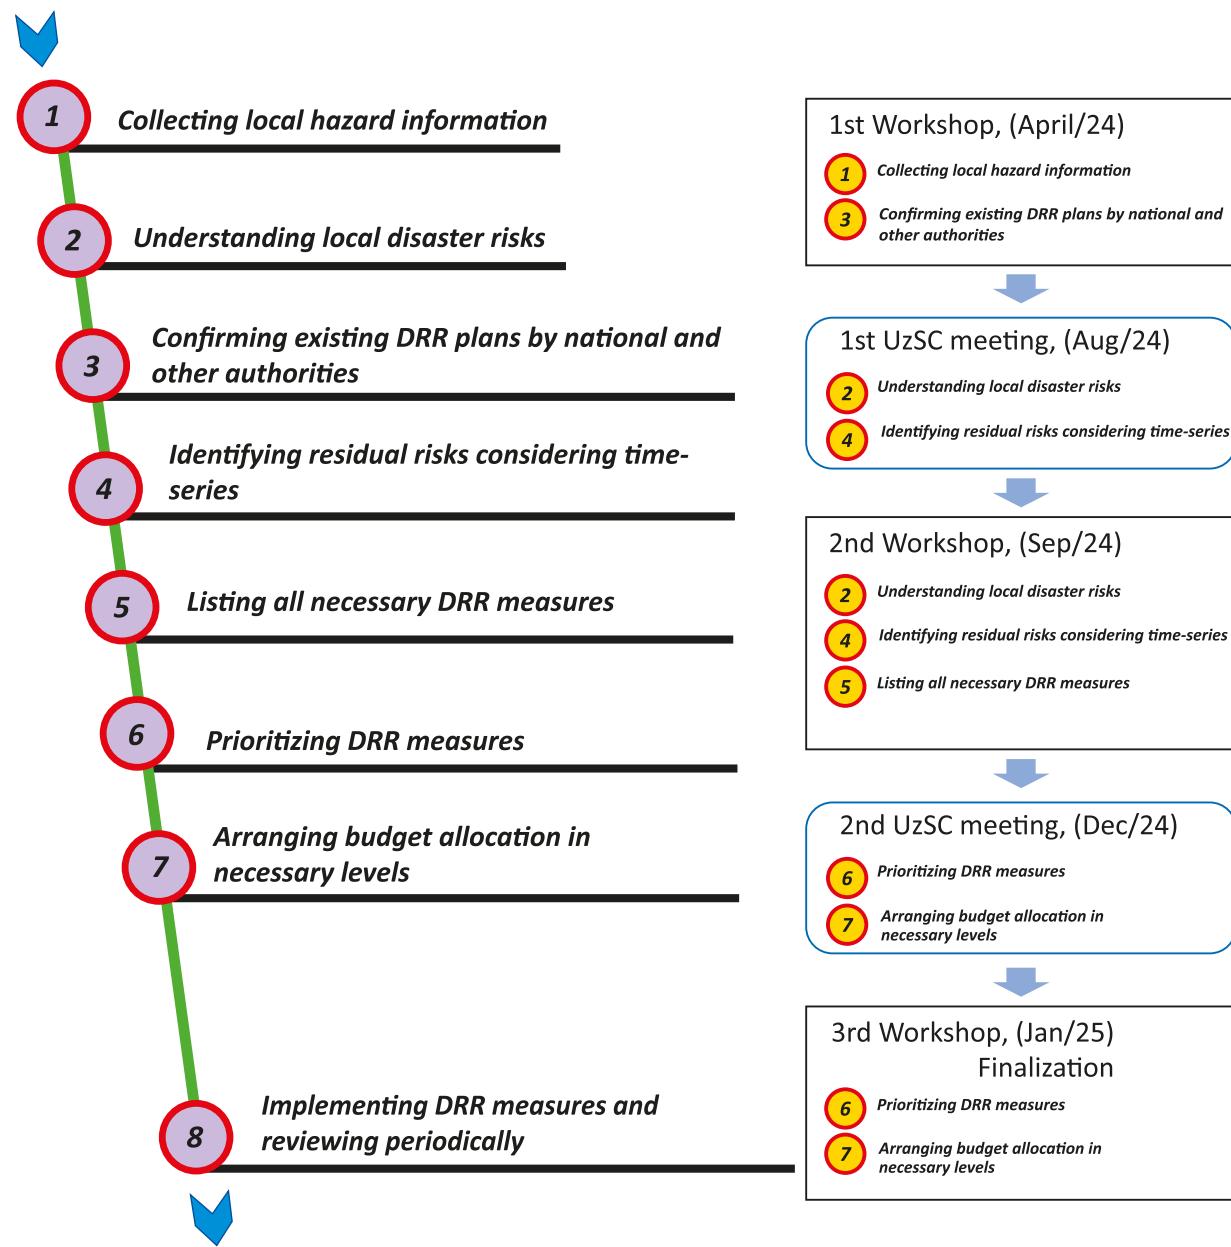

Figure 1-3. "8 Steps" for Upazila DRR Planning in case of this plan

Chapter-2. Geographic, Socio-economic, and Meteorological Conditions

2.1 Location and Geographic Conditions

2.1.1 Location of the Upazila

Chilmari Upazila is an Upazila of Kurigram District under the Rangpur Division of the northern part of Bangladesh. It is located near the Indo-Bangladesh frontier, which is intersected by the mighty Brahmaputra River. It is located 73.3 km south-east of the divisional headquarters city of Rangpur. The is flanked on the north by Ulipur Upazila, on the south by Char Rajibpur and Sundarganj Upazilas, on the east by Raumari and Char Rajibpur Upazilas, and on the west by Sundarban and Ulipur Upazilas (Figure 2-1). The total area of the Upazila is approximately 232.50 km² and is located between 25°26' and 25°40' north latitudes and 89°38' and 89°48' east longitudes.

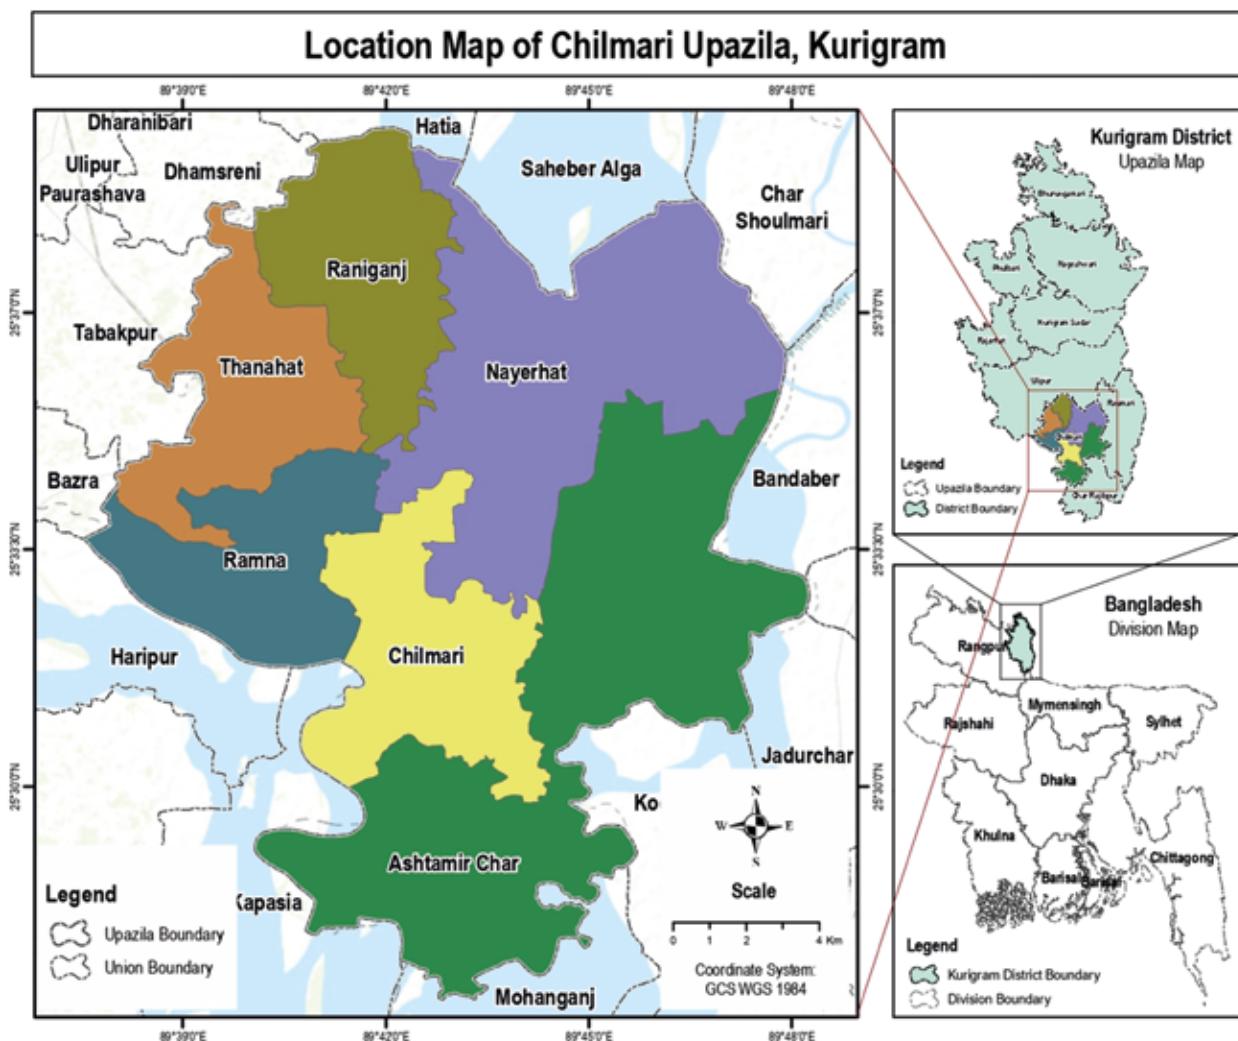

Figure 2-1. Location Map of Chilmari Upazila

2.1.2 Topography of the Upazila

The topography of Chilmari Upazila consists mostly of flatland and riverine itself with an average elevation of 28.78m above mean sea level (Figure 2-2). Therefore, it is often heavily flooded during the rainy seasons. The flat areas are used for agriculture, fishing in open water bodies between Testa River and Brahmaputra River and settlement.

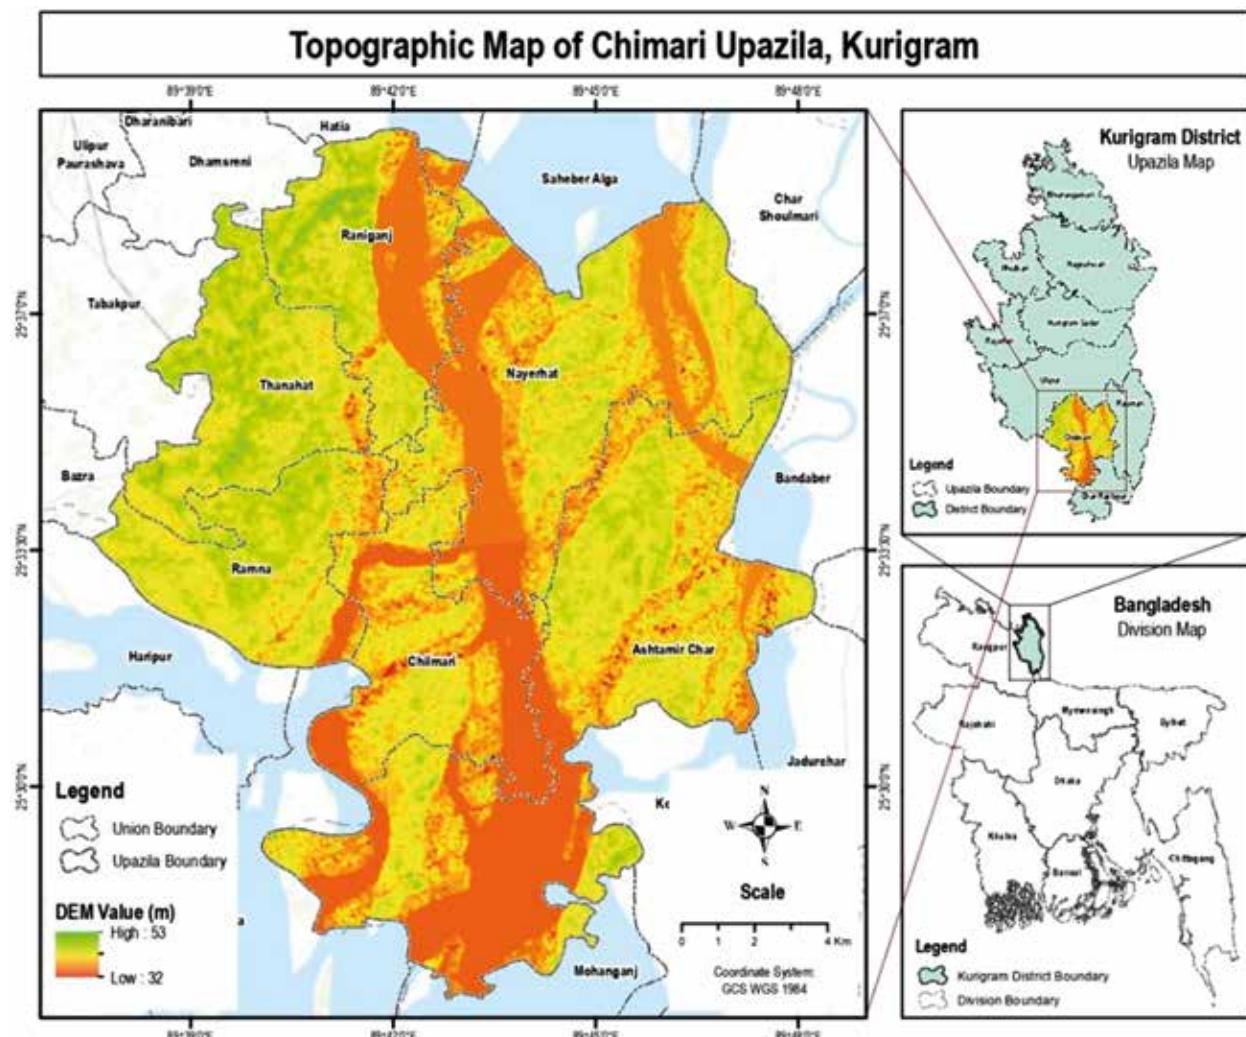

Figure 2-2. Topographic Map of Chilmari Upazila, Kurigram District

2.1.3 River System of the Upazila

Kurigram district is located in the alluvial plain of the Teesta-Brahmaputra basin. The region is prone to flooding during the monsoon season due to the rivers' overflow and the low elevation of the area.

The major rivers are the Brahmaputra River, Dharla River, and Teesta River, and the minor rivers include the Dudhkumar River, Phulkuar River, Gangadhar River, Jinjiram River, and others.

The Dharla River is a transboundary river flowing through India, Bhutan and Bangladesh. The river enters Bangladesh through Lalmonirhat District and flows through Chilmari Upazila, Kurigram District. The Dharla River is a tributary of the Brahmaputra River which is a swift river during the rainy season and a braided

stream in winter. The river is prone to flooding, especially during the rainy season. For example, in June 2024, the Dharla River rose due to heavy rains and river erosion was reported in Chilmari. The length of the river within Bangladesh is about 75 km. One has to cross it to go to Nageshwar, Fulbaria and Bhurungamari upazilas in northern Kurigram.

The Teesta River is a river in Bangladesh that flows through Kurigram District and joins the Brahmaputra River at Haripur Port in Kurigram District. The Teesta River has caused severe erosion and flooding in Kurigram, submerging hundreds of hectares of Aman paddy fields. The Teesta River's water level can rise due to continuous rainfall and also drop due to a decrease in rainfall and upstream water flow.

The Brahmaputra River originates from the Kailash ranges of the Himalayas and enters Bangladesh in the Bhabanipur area of the northeast of Kurigram district.

According to BWDB, in July 2024, the Brahmaputra River was flowing 59 cm above the threshold at Chilmari water gage point, and meanwhile, the water level of Dharla River water gage point rose by 20 cm above the danger level.

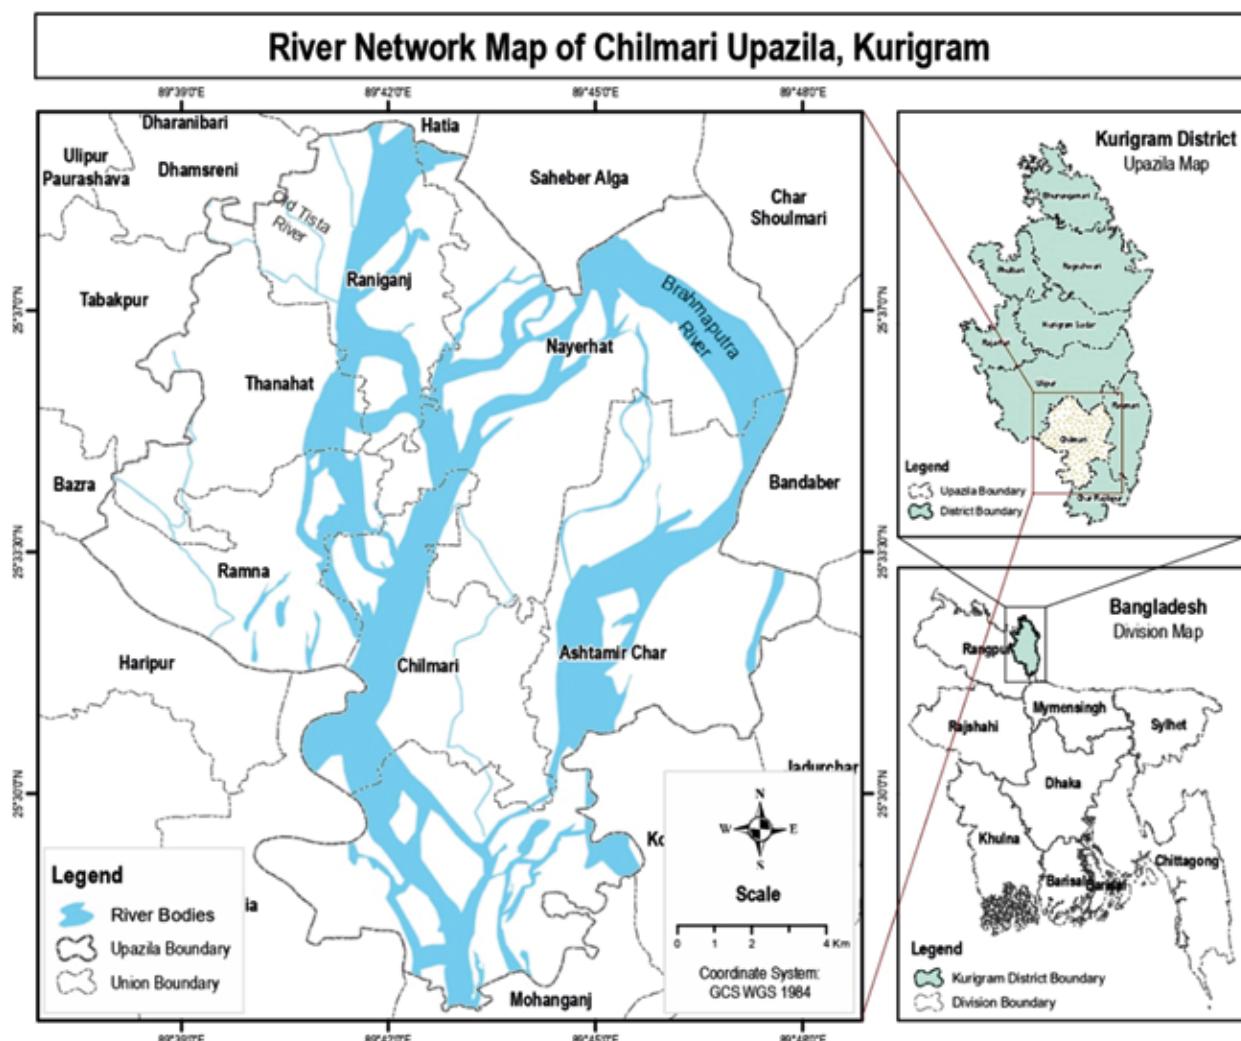

Figure 2-3. River network map of Chilmari Upazila

2.2 Socio-economic Conditions

2.2.1 Demography

Chilmari Upazila is divided into six unions: Ashtamir Char, Chilmari, Nayarhat, Ramna, Raniganj and Thanahat. According to the census 2022, the total population of the Upazila is 131,715. The demography of Chilmari Upazila is shown below.

Table 2-1. Demography of Chilmari Upazila

Union Name	Total Area (km ²)	Total Population	Number of Households
Ashtamir Char	75.10	16,880	4,524
Chilmari	26.76	8,063	2,317
Nayerhat	57.98	10,281	2,557
Ramna	20.95	31,625	8,086
Raniganj	25.80	22,718	6,021
Thanahat	25.92	42,148	11,080
Total	232.50	131,715	34,585

Source: Population and Housing Census 2022, District Report: Kurigram

2.2.2 Economy and Industry

The economy of Chilmari Upazila mainly depends on agriculture and agriculture-based farming. The main crops in this area are paddy, jute, wheat, mustard, vegetables, and fruits like mango, jackfruit, black berry, papaya, banana, guava. The manufactoryes of this area are welding factory, saw mill, rice mill, and the industries are goldsmith, potteries, blacksmith, jute industries, weaving, nakshi kantha, wood work, bamboo work, etc.

According to the district statistics (2011), agriculture contributes to the economy 67.85%, non-agricultural sectors 5.17%, industry 0.38%, commerce 9.38%, transport and communication 1.23%, service 6.81%, construction 1.01%, religious service 0.09%, rent and remittance 0.22% and others 7.86%.

The following table (Table 2-2) shows different sectors involved in the economy of Chilmari Upazila.

Table 2-2. Employed by sectors of Chilmari Upazila

Sector Name	Working Population	
	2011	2022
Agriculture	15,534	22,768
Industry	294	3,335
Service	2,625	10,592

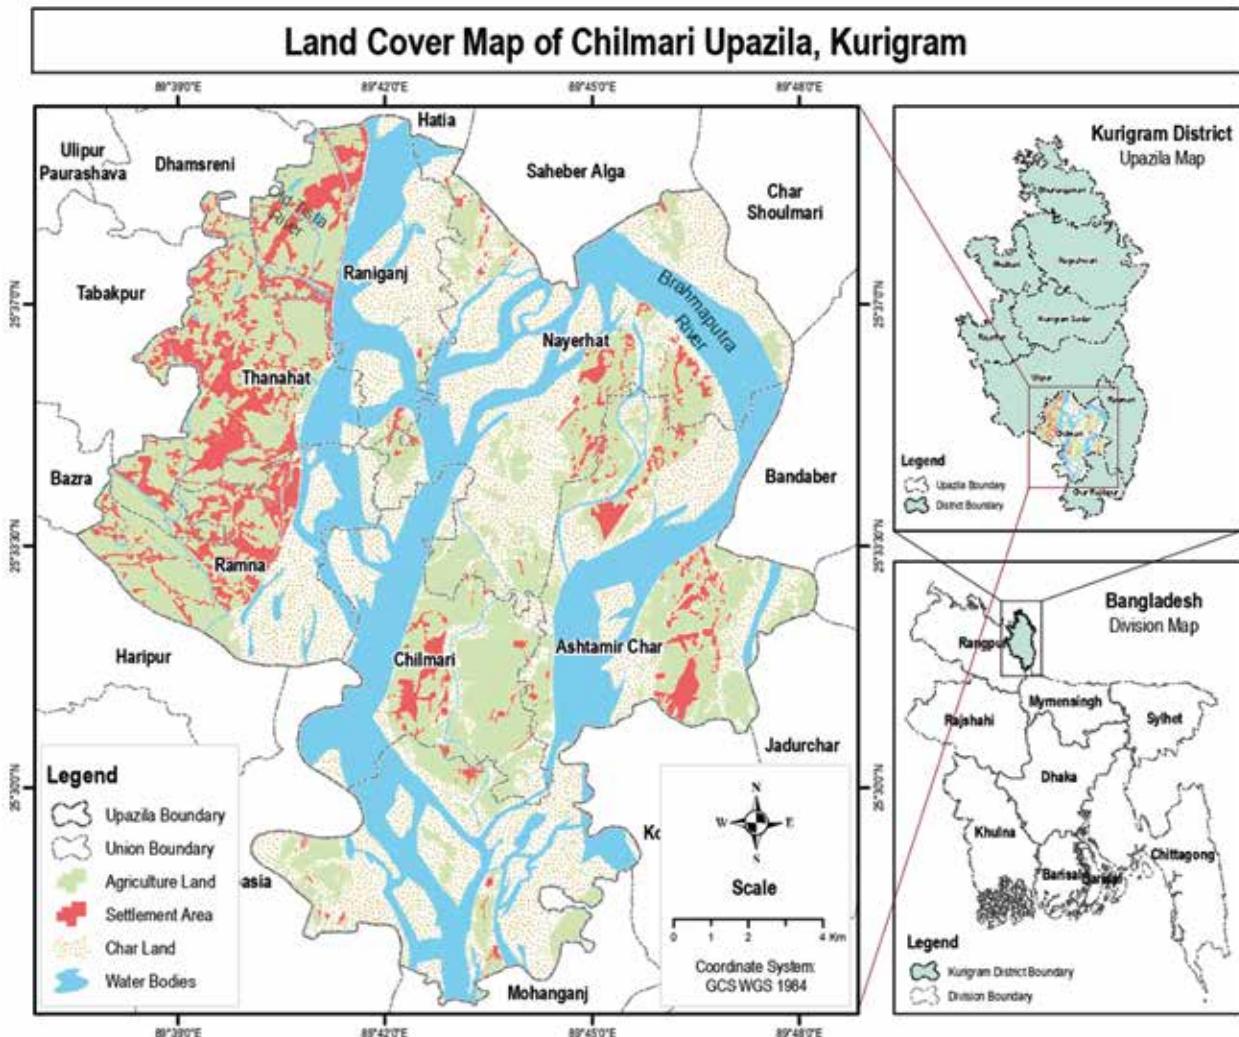

Figure 2-4. Land Cover Map of Chilmari Upazila

2.2.3 Urbanization

The urbanization rate in Kurigram District, expressed as the percentage of the population living in urban or urbanized areas, is relatively low compared to the national average of 31.51% (Population and Housing Census 2022). A comparison between 2011 and 2022 shows that the urbanization rate in Chilmari Upazila only decreased, while those increased in the upazilas of Bhurungamari, Kurigram Sadar, Nageshwari, Phulbari, Rajarhat, Rajibpur, Raumari and Ulipur. According to the 2022 census, only 28.95% of the population of Chilmari Upazila resides in urban areas. The annual population growth rate in Chilmari Upazilla from 2011 to 2022 is 0.72%, which is lower than the national average of 1.22% (Population and Housing Census 2022).

The annual population growth rates in the unions of Chilmari, Ramna, Raniganj and Thanahat have experienced annual population growth rates higher than the upazila average. This elevated growth is one of the indicators of ongoing urbanization trends in these unions (Table 2-3).

Table 2-3. Population growth rate of Chilmari Upazila

Union Name	Population		Annual Population Growth Rate (2011 - 2022)
	2011	2022	
Ashtamir Char	17,701	16,880	-0.46%
Chilmari	6,902	8,063	1.68%
Nayerhat	10,519	10,281	-0.23%
Ramna	28,729	31,625	1.01%
Raniganj	20,513	22,718	1.07%
Thanahat	38,477	42,148	0.95%
Total	122,841	131,715	0.72%

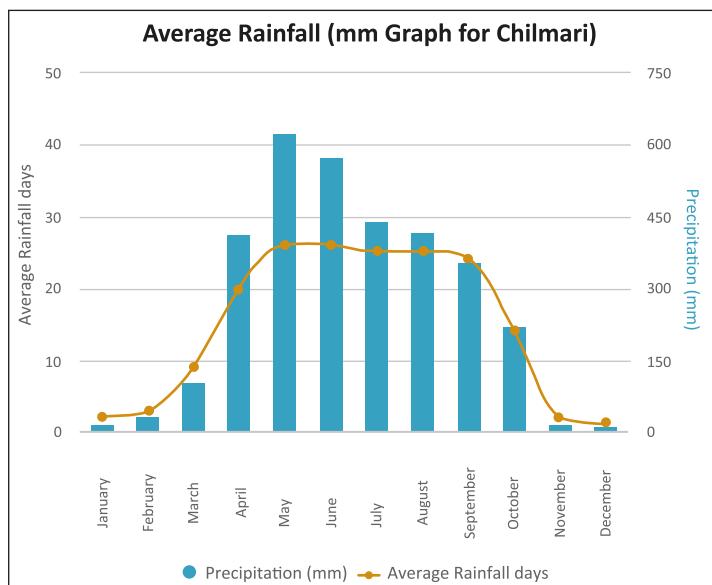

Source: Population and Housing Census 2011, Community Report: Kurigram, Population and Housing Census 2022, District Report: Kurigram

2.3 Meteorological Conditions

Chilmari Upazila has a humid subtropical climate, which is warmer in the summer and cooler in the winter than other parts of Bangladesh. The average annual rainfall of Chilmari Upazila is about 3,202.8 mm¹ for the period from January 2009 to December 2024 shown in Figure 2-5, which is higher than the average annual rainfall of Bangladesh (2,200 mm).

As shown in Figure 2-5, most rainfall in the Upazila is concentrated for the months from April to September, which is more than 350 mm, and this heavy rainfall causes flooding in this area. The average annual rainfall days is 177 days.

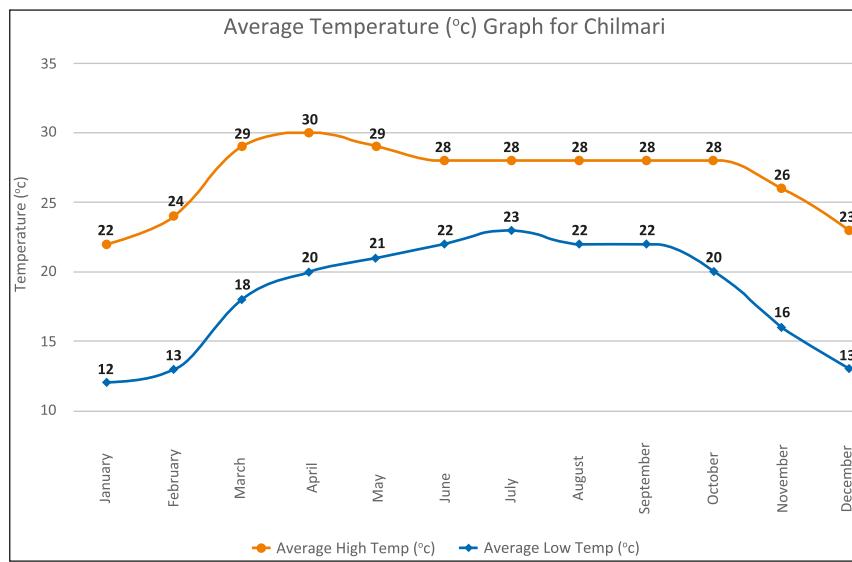

The Upazila has a little higher temperature in comparison with the national average. The average maximum temperature of 30.0°C reached in April, as indicated that the highest temperature is 37.0°C in April 2024. The average minimum temperature is 12.0°C in January (Figure 2-6).

Chapter-3. Hazard Characteristics and Disaster Risk

3.1 Disaster Record of the Upazila

3.1.1 Disaster Record

Kurigram has a long history of natural disasters, predominantly characterized by floods, riverbank erosion, droughts, and cold waves. Table 3-1 shows some significant historical disasters that impacted the region.

Table 3-1. Recent Disaster Record in Chilmari Upazila

No.	Year	Damage
1. Flood		
(1)	1988	1988 Flood: One of the most devastating floods in the history of Bangladesh, which also affected Kurigram. The Brahmaputra and Teesta rivers overflowed, causing widespread destruction. Thousands of people were displaced, and crops were severely damaged. The water level at Chilmari point was 25.04 mPWD, whereas the danger level is 24 mPWD. The water above the danger level stayed for 15 days.
(2)	1998	1998 Flood: Often referred to as the "flood of the century" in Bangladesh, Kurigram was one of the worst-hit areas. Water remained stagnant for weeks, and approximately 60-70% of the region was submerged. It led to a large-scale humanitarian crisis, with food shortages, loss of property, and diseases. The water level at Chilmari point was 24.77 mPWD, whereas the danger level is 24 mPWD, and the water above the danger level stayed for 22 days.
(3)	2007	2007 Flood: Affected by heavy monsoon rains and water coming from upstream India, Kurigram faced significant damage. The flood submerged large areas of agricultural land, damaging crops and leaving thousands of people displaced.
(4)	2012	2012 Flood: The recorded water level on 30 June was 24.48 m at Chilmari station, which was 48 cm above the danger level for 8 days.
(5)	2014	2014 Flood: Water level: 24.49 mPWD (danger level of 24.0 mPWD) for 13 days
(6)	2015	2015 Flood: Water level: 24.44 mPWD (danger level 24.0 mPWD) for 10 days at Chilmari BWDB point
(7)	2016	2016 Flood: Water level: highest peak water level of 24.99 mPWD, which was 54 cm above its danger level (24.45 mPWD) for 23 days in monsoon
(8)	2017 ²	2017 Flood: A severe flood affected Kurigram, submerging large parts of the district. The disaster impacted hundreds of thousands of people, displacing families, destroying homes, and wiping out significant portions of crops and livestock. The district saw prolonged waterlogging, which exacerbated the crisis. The water level at Chilmari (Brahmaputra) reached a peak of 24.87 mPWD on 15 August (0.87 m above danger level DL 24.0 mPWD) for 14 days above danger level in the 2017 monsoon. At Noonkhawa (Brahmaputra) station, the water level attained the peak at 27.39 mPWD for 3 days, water flowing above the danger level (DL 27.25 mPWD) Affected population in the district: 165,955
(9)	2019	2019 Flood: Water level: highest peak of 25.02 m for 17 days

² FFWC, Annual flood report 2017. 2017, Flood Forecasting and Warning Centre, Bangladesh Water Development Board, Government of Bangladesh Dhaka, Bangladesh. p. 108. <http://www.ffwc.gov.bd/images/annual17.pdf>

No.	Year	Damage
(10)	2021 ³	2021 Flood: Water level at Chilmari (Brahmaputra) reached peak 24.21 mPWD on 2 September (0.51 m above danger level DL 23.7 mPWD, revised after 2017 flood) 10 days above danger level in 2021 monsoon. At Noonkhawa (Brahmaputra) station, the water level attained the peak at 26.5 mPWD as same as the danger level (DL 26.5 mPWD, revised after the 2017 flood)
(11)	2022	2022 Flood: Water level reached 32 cm at Chilmari (Brahmaputra) point and 74 cm at Hatia (Brahmaputra) point above the danger level on 21 June and the water above the danger level stayed for 7 days.
(12)	2024	2024 Flood: Water levels rising of the Brahmaputra, Dudhkumar, and Dharla rivers; 72 cm above its danger point at Chilmari; 71 cm above at Hatiya union Affected population: Over 70,000 people Damaged croplands: 2300 hectares
2. Riverbank erosion		
(1)	1970s – 1990s	1970s-1990s: Throughout these decades, Kurigram saw steady riverbank erosion, particularly along the Brahmaputra River. Many communities lost their homes and farmland, forcing frequent relocation and deepening poverty.
(2)	2016 - 2019	2016-2019 Erosion Events: Riverbank erosion became more severe, with thousands of people losing their homes annually. This ongoing issue has led to the displacement of entire villages, with some areas disappearing entirely into the river.
3. Drought		
(1)	2019 ⁴	Just after floods, many farmers were hit hard by drought in Kurigram after the water receded. Many farmers could not plant transplanted Aman rice due to the lack of saplings and water, due to flooding. Those who planted Aman tried to protect the field by irrigating which is quite costly as Aman is mainly rainfed crop when farmers are not prepared for irrigation.
(2)	2024 ⁵	Severe droughts, excessive rainfall and flooding had caused an extensive loss (1.05 billion BDT) to agriculture (jute, aman seedbeds, vegetables and aush paddy) in Kurigram in 2024. Due to the drought, only 17,256 hectares were cultivated in 2024, despite the Department of Agricultural Extension (DAE) targeting 17,950 hectares for jute cultivation. Kurigram was hit consecutively by drought during April and May, followed by excessive rainfall in June (1,100 mm recorded), while flooding began in early July. The DAE advised farmers in flood-affected areas to prepare for early Rabi crops if water takes time to recede.
4. Cold wave		
(1)	2021 ⁶	On 15 January 2021, Kurigram faced cold waves of 8.8°C hitting children and elderly people of low-income families and the farmers hard when most day-labourers were unable to go out for work. At least 800-900 people were taking treatment every day for cold-related illnesses at Kurigram General Hospital while thick fog was recorded near the riversides that would damage the crop creating blast and other diseases.

No.	Year	Damage
(2)	2024 ⁷	On 25 January 2024, Kurigram faced cold waves of 9.4°C when around 2,000 schools remained closed and thick fog had enveloped the entire region, while on 26 January morning the district recorded its lowest temperature at 6.8°C. The drop in temperature had led to discomfort in the Brahmaputra, Dharla, Teesta, Dudhkumar and 16 other riverside areas, affecting the lives of local citizens. Hospitals in the district had reported an increase in cases of diarrhea, pneumonia, respiratory distress, colds and coughs and other winter-related illnesses.

Reference:

The hydrograph of monsoon season at Chilmari station, Brahmaputra River has been shown in Figure 3-1 in which the highest water level was 24.37 mMSL recorded in 1988, whereas the danger level at this station is 23.25 mMSL.

3.1.2 Disaster Experience

In this section, the issues/challenges faced by each Union Parishad are shown in Figures 3-2 to 3-7. These disaster experiences were compiled based on the opinions of the Union Parishad representatives expressed at the first UzDRRAP formulation workshop held in April 2024, as well as interviews with UDMC members and local residents.

Issues/challenges in Ashtamir Char Union Parishad

The people of Ashtamir Char have experienced floods, water logging, river erosion, drought and lightning almost every year. Because of flooding in this area, crops have been destroyed, and houses, the transport system, the education system, and the medical services have collapsed. Due to waterlogging in the drains, garbage causes diseases with an air pollution. Furthermore, in this area, houses, agricultural land, and educational institutions have been destroyed as a result of river erosion.

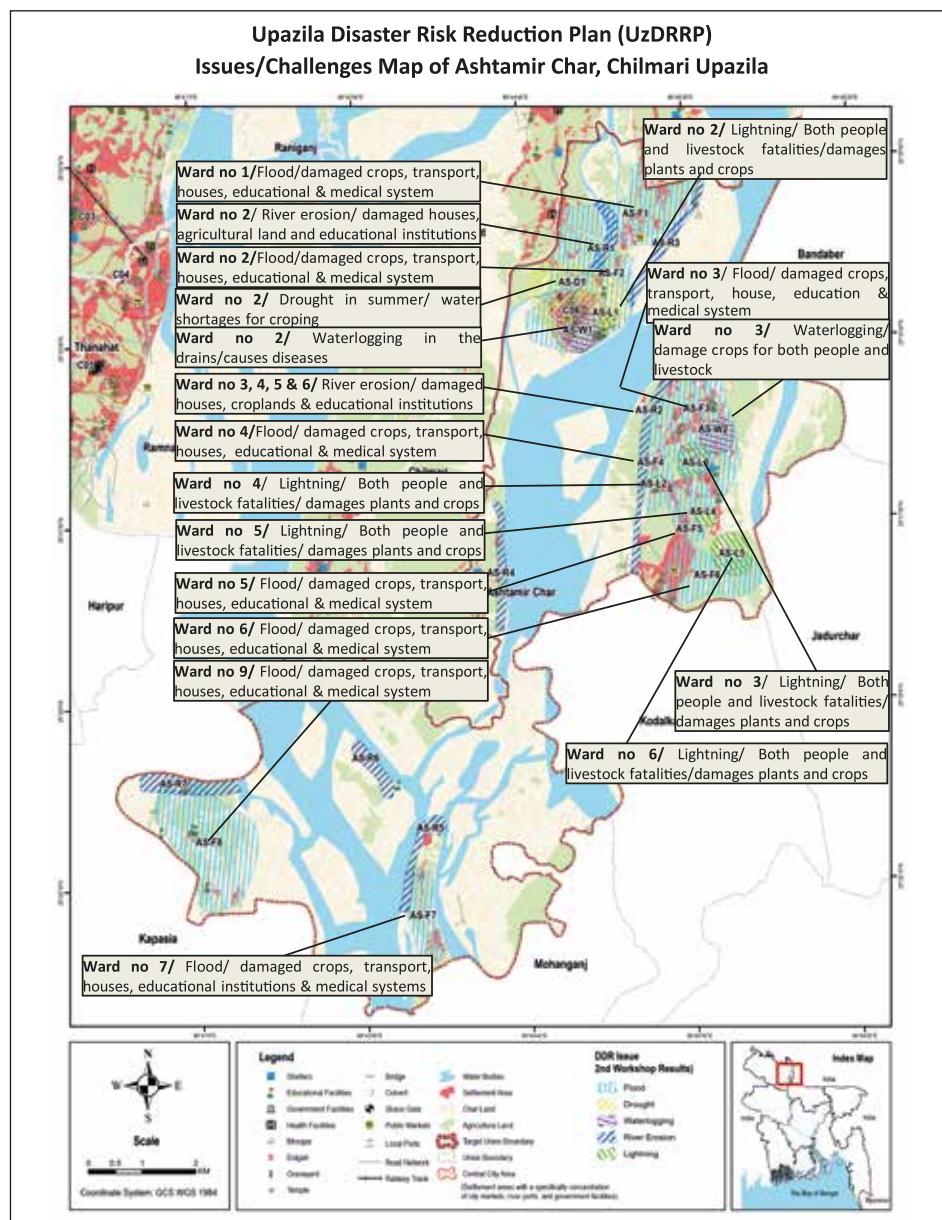

Figure 3-2. Issues/challenges in Ashtamir Char Union Parishad

Issues/challenges in Chilmari Union Parishad

The people of Chilmari have experienced the disaster of flooding, water logging, river erosion, drought and lightning almost every year. As Chilmari is a relatively low-lying area, crops, houses, and the transport system have been destroyed, and there are issues with safe drinking water and sanitation because of floods and waterlogging. In this area, river erosion causes the loss of many houses and croplands every year. In summer, farming becomes difficult due to a lack of water in Chilmari.

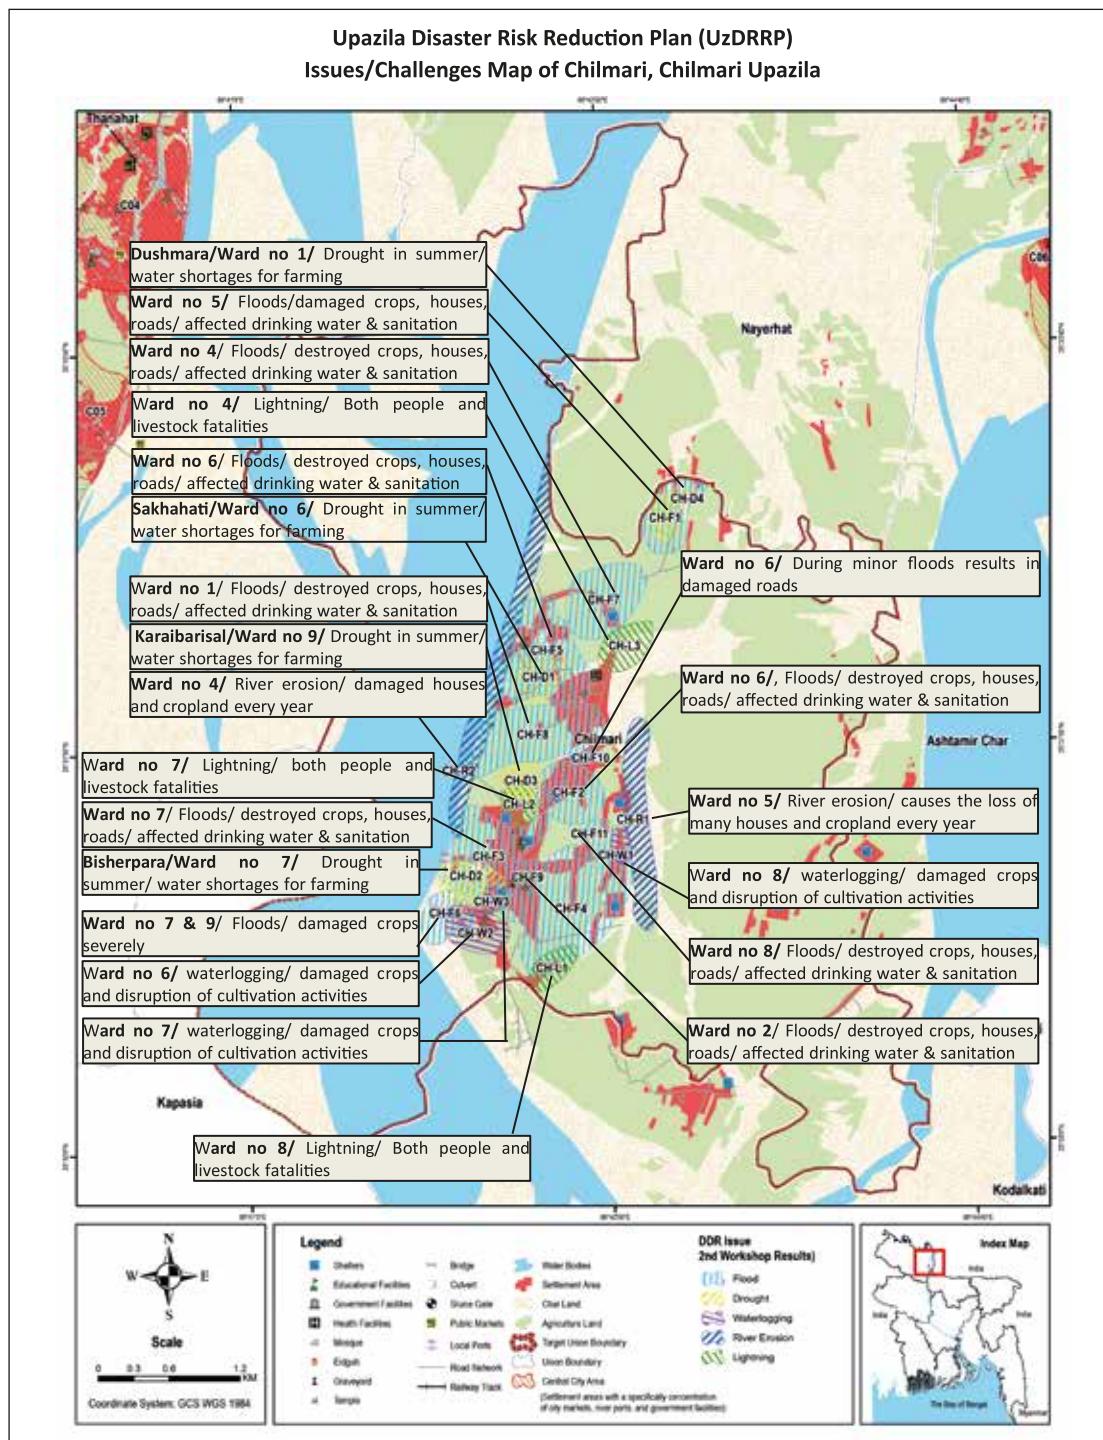

Figure 3-3. Issues/challenges in Chilmari Union Parishad

Issues/challenges in Nayerhat Union Parishad

The people of Nayerhat have experienced the disaster of flooding, river erosion, drought and lightning almost every year. During flooding, most houses and croplands are damaged; cattle die from various diseases and a shortage of adequate food. In this area, houses, agricultural lands, and educational institutions have been destroyed as a result of river erosion. Most of the areas of this union have been affected by river erosion. Due to the prolonged summer, this area has also been affected by drought.

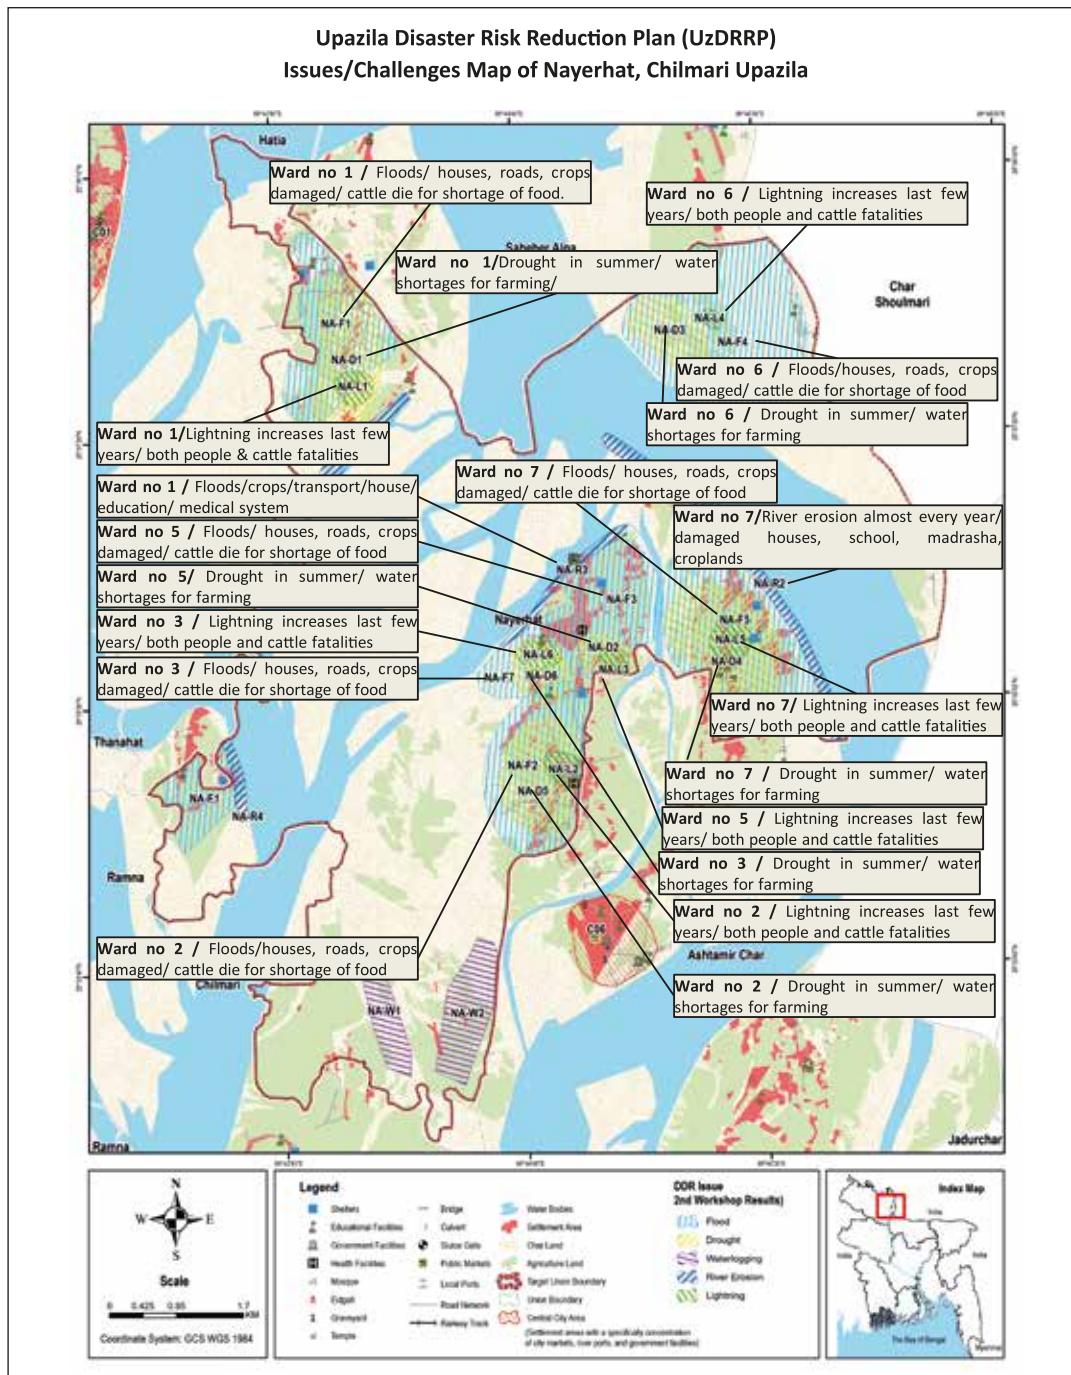

Figure 3-4. Issues/challenges in Nayerhat Union Parishad

Issues/challenges in Ramna Union Parishad

The people of Ramna Union Parishad have experienced the disaster of flood, waterlogging, river erosion, drought and lightning almost every year.

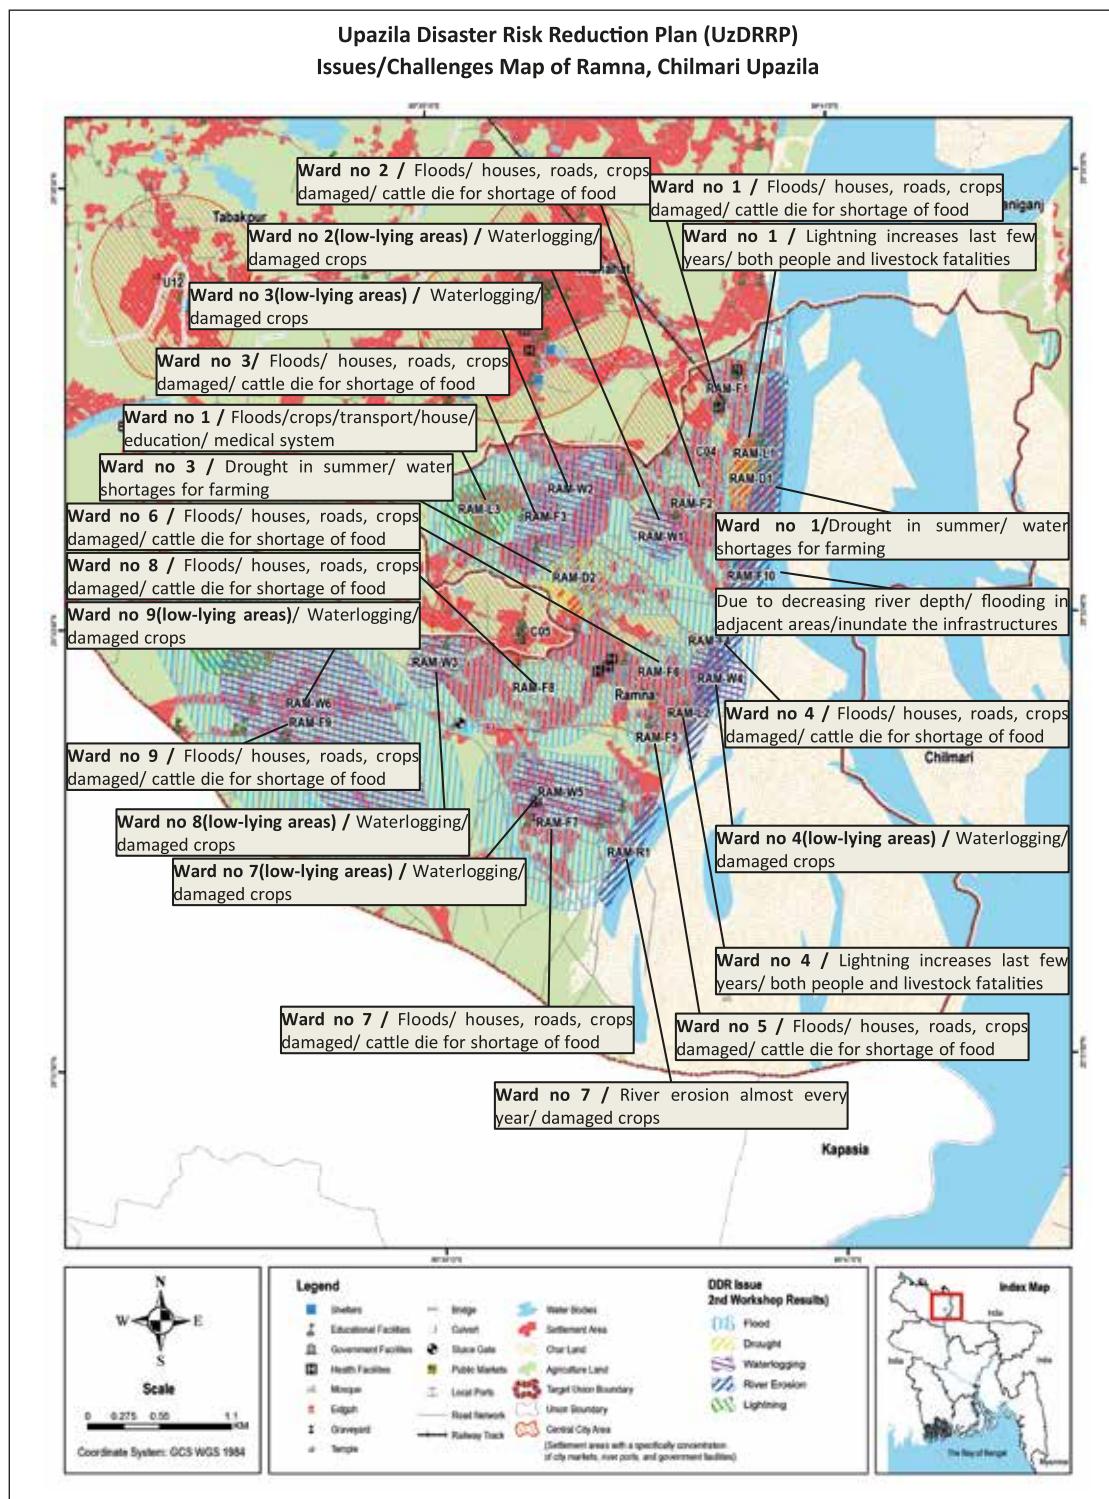

Figure 3-5. Issues/challenges in Ramna Union Parishad

Issues/challenges in Raniganj Union Parishad

The people of Raniganj have experienced the disaster of flood, waterlogging, river erosion and lightning almost every year.

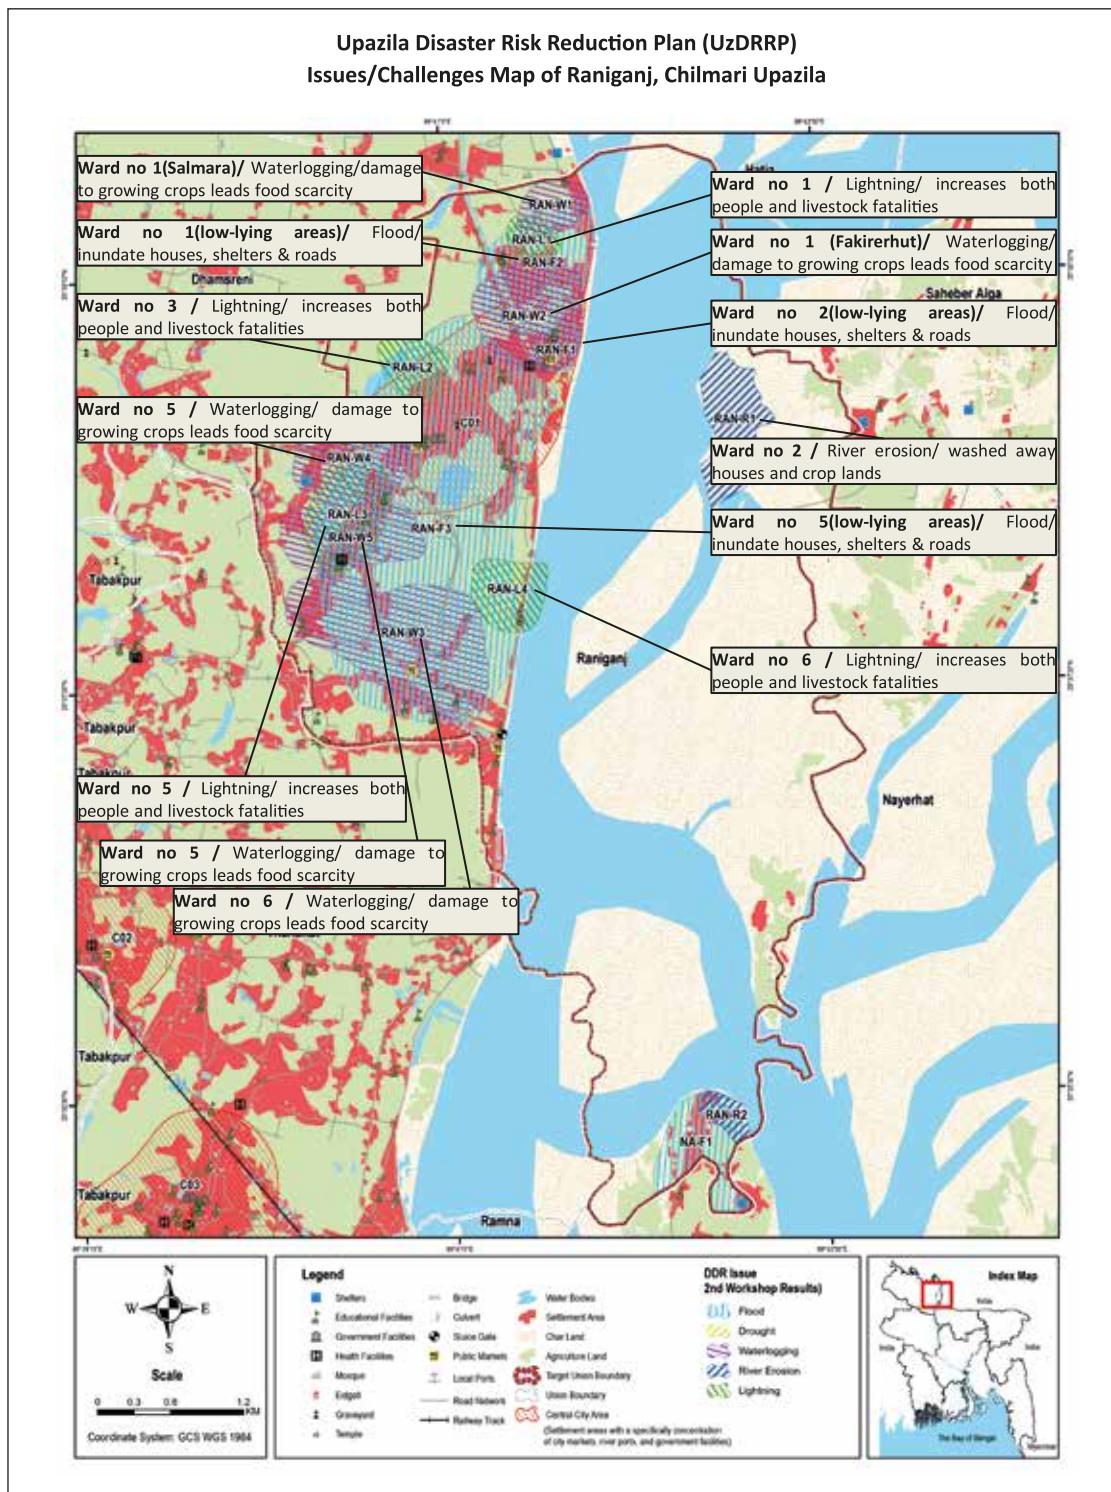

Figure 3-6. Issues/challenges in Raniganj Union Parishad

Issues/challenges in Thanahat Union Parishad

The people of Thanahat have experienced mainly waterlogging as some areas are relatively low-lying and a little rain causes waterlogging almost every year.

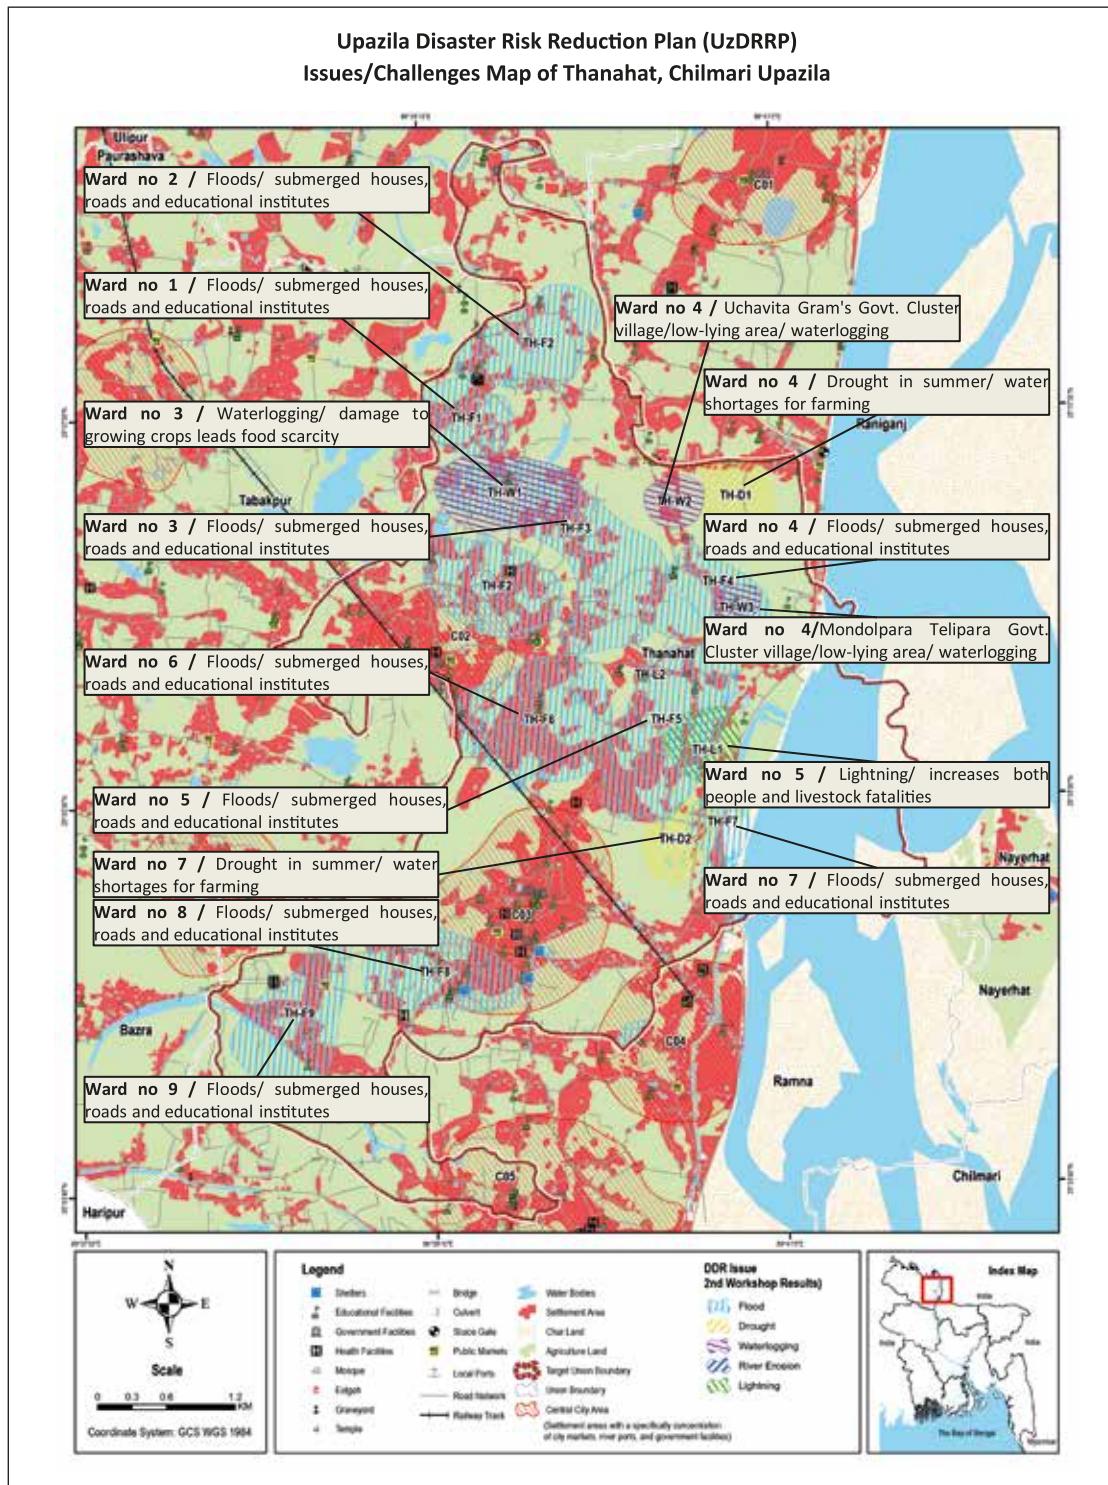

Figure 3-7. Issues/challenges in Thanahat Union Parishad

3.2 Target Hazards of this Plan

As described in the previous section as challenges/issues given by the Union parishad, this Plan targets all the possible disasters in the Upazila, including lightning and drought, whereas it objectively and scientifically analyzes the following disasters with high damage potentials and shows hazard maps to identify the hazard potential in the Upazila.

- Flood/Waterlogging
- River erosion
- Earthquake

Table 3-2. Damage Report on disasters in 2020 (flood, waterlogging and river erosion)

Union Name	Area(km ²)		Agricultural area (ha)		Population		Households	
	Total	Affected	Total	Affected	Total	Affected	Total	Affected
Ashtamir Char	75.01	65	1239	740	16880	16288	4075	4072
Chilmari	26.93	25	810	525	8063	7772	2021	2021
Nayorhat	52	48	953	604	10281	10212	2573	2553
Ramna	20.89	18	666	506	31625	28612	7183	7153
Raniganj	25.83	25	546	408	22718	20510	5404	5384
Thanahat	24.37	20	360	275	42148	38432	9683	9630
Total	225.03	201	4574	3058	131715	121826	30939	30813

Source: D-form from PIO, Chilmari Upazila, Kurigram District; dated 28/07/2020

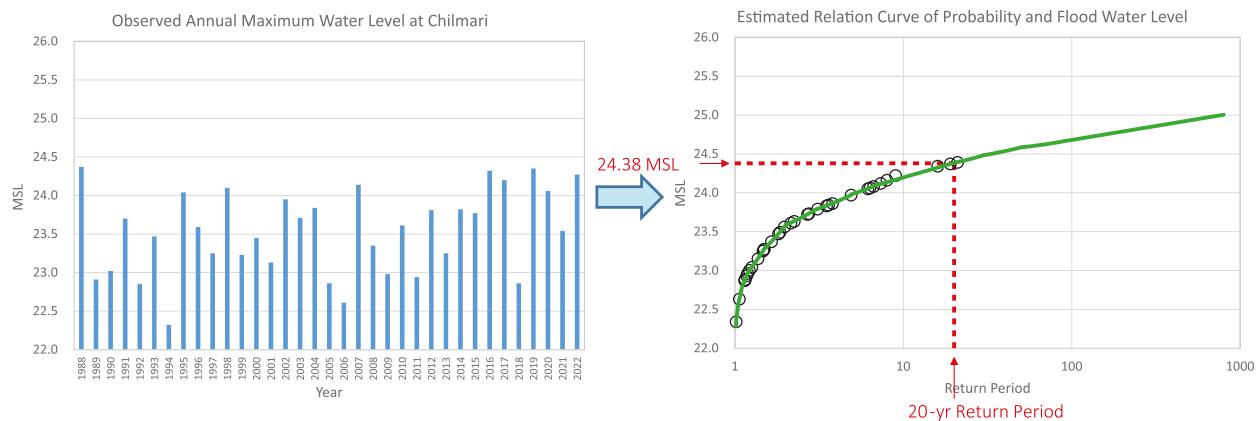

3.3 Hazard and Disaster Risk of the Upazila by Disaster

3.3.1 Flood

(1) Hazard

The flood hazard risk was assessed based on observed historical water level data from the Bangladesh Water Development Board (BWDB) by combining with danger water levels defined by BWDB. The danger water level is the water level above which the flood may cause damages to nearby crops and homesteads. It is generally fixed slightly below the design flood level of the embankment. In terms of the probability of occurrence, the corresponding return period is approximately 2 to 5 years, although it varies depending on the location. Therefore, the difference between the design flood level and the danger water level needs to be calculated.

To obtain the design flood level, which corresponds to a 20-year return period's flood for this plan, the highest water level of each year was plotted against the year after sorting the values against year in ascending order. Then, a trend line was drawn in accordance with standard procedures for hydrological statistical analysis. From this trend line, any return period's water level could be extracted. For the sake of this plan, the 20-year return period's water level of 24.38 m MSL (above mean sea level) was considered (Figure 3-8).

Source: JICA Expert Team, based on data provided by BWDB

Figure 3-8. Observed annual maximum water level at Chilmari (left) and plotting water level against year (right)

Figure 3-9 is the flood hazard map of Chilmari Upazila using the inundation depth of a 20-year return period, which causes tremendous damage to paddy production (cultivation). Among the unions in Chilmari Upazila, all are particularly prone to flooding because the lands of such unions are low-lying. Special attention should be taken at Ashtamir Char, Chilmari, and Nayerhat unions, as most areas (>50%) have a probability of being inundated above 3.6 m of flooding at the 20-year return period (Table 3-3). The paddy fields and the settlement area in such unions are affected severely and widely.

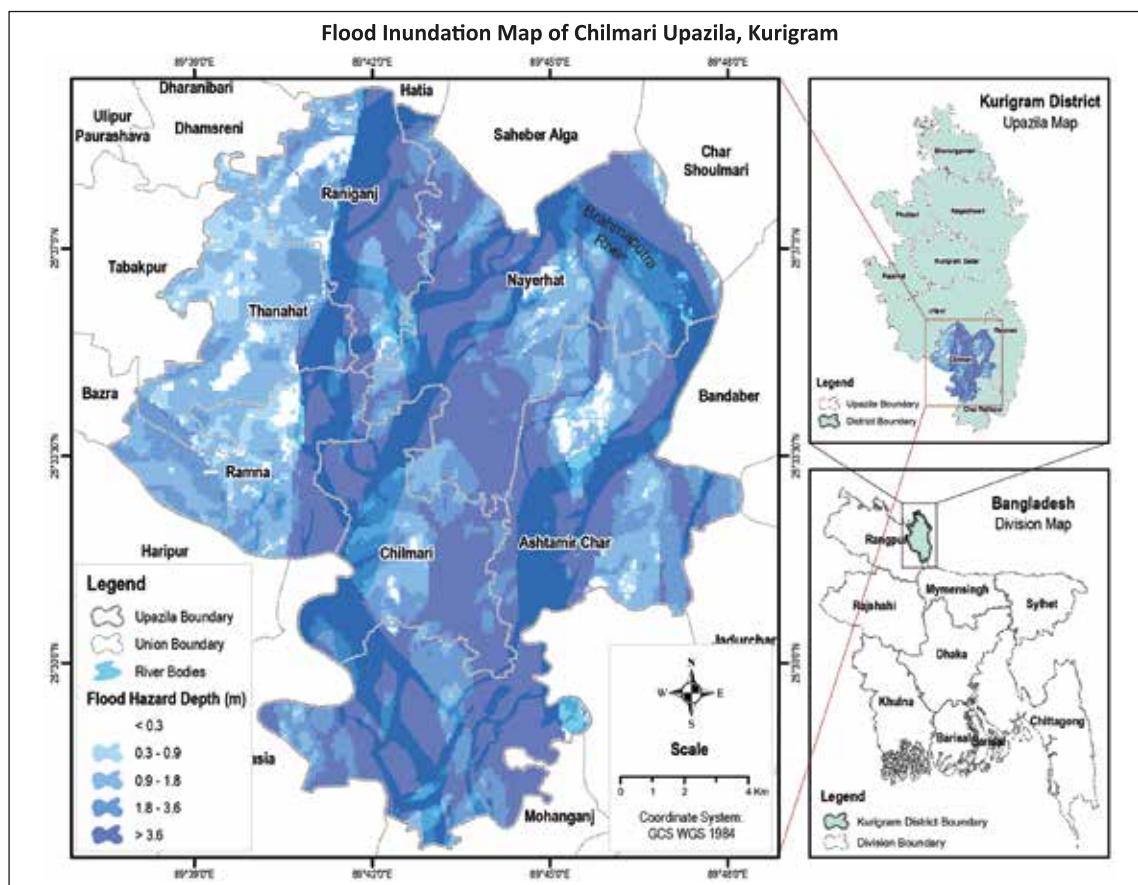

Figure 3-9. Flood Hazard Map at the 20-year return period of Chilmari Upazila

Table 3-3: Union-wise flood inundation area in hectare and percentage of area of Chilmari Upazila

Union/Upazila	Below 0.3 m (%)	0.3 - 0.9 m (%)	0.9 - 1.8 m (%)	1.8 - 3.6 m (%)	Above 3.6 (%)	Total Area (%)
Ashtamir Char	229.3 (2.9)	185.3 (2.4)	1,101.3 (14)	1,785.3 (22.7)	4,551.3 (58.0)	7,852.5 (100)
Chilmari	19.2 (0.6)	28.6 (1.0)	351.2 (11.8)	757.0 (25.5)	1,817.3 (61.1)	2,973.4 (100)
Nayerhat	103.7 (1.8)	100.5 (1.7)	962.4 (16.5)	1,267.7 (21.8)	3,385.6 (58.2)	5,819.8 (100)
Ramna	124.1 (4.9)	231.1 (9.2)	885.4 (35.2)	547.7 (21.8)	726.4 (28.9)	2,514.7 (100)
Raniganj	166.7 (6.3)	151.9 (5.7)	571.4 (21.6)	507.7 (19.2)	1,246.5 (47.1)	2,644.2 (100)
Thanahat	182.0 (7.0)	608.5 (23.6)	1,173.9 (45.5)	370.3 (14.3)	247.7 (9.6)	2,582.4 (100)
Chilmari Upazila	825.1 (3.4)	1,306.0 (5.4)	5,045.6 (20.7)	5,235.7 (21.5)	11,974.8 (49.1)	24,387.1 (100)

(2) Disaster Risk

The flood disaster risk in the Upazila was estimated focusing on three major assets to be protected: cultivation fields, settlement areas, as well as important infrastructures and public facilities. By overlaying the flood hazard map on these areas, the affected areas were identified.

I. Damage estimation of the paddy field by flood

As shown in Figure 3-10 and Figure 3-11, the most vulnerable unions to flooding are Ashtamir Char, Chilmari and Nayerhat Unions, consisting of large areas of dunes of the Brahmaputra River. The inundation areas are >1,000 ha at each union. Besides, the rest unions, which are Thanarhat, Ramna and Raniganj, will also be inundated with flood water that would damage paddy fields, however lesser extent than the other three mostly affected unions (Figure 3-9 and 3-10).

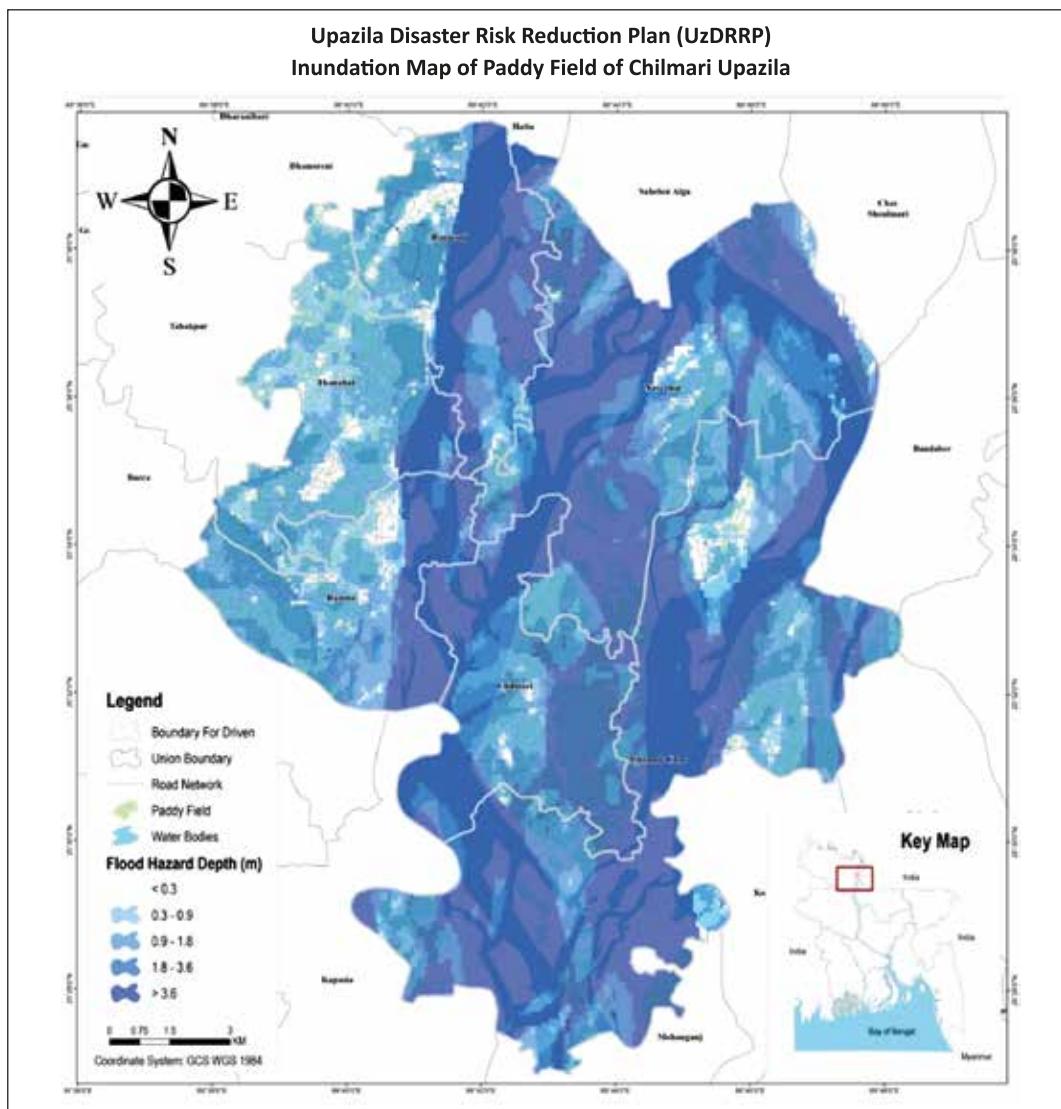

Figure 3-10. Inundated Area of Paddy Field by the flood of Chilmari Upazila

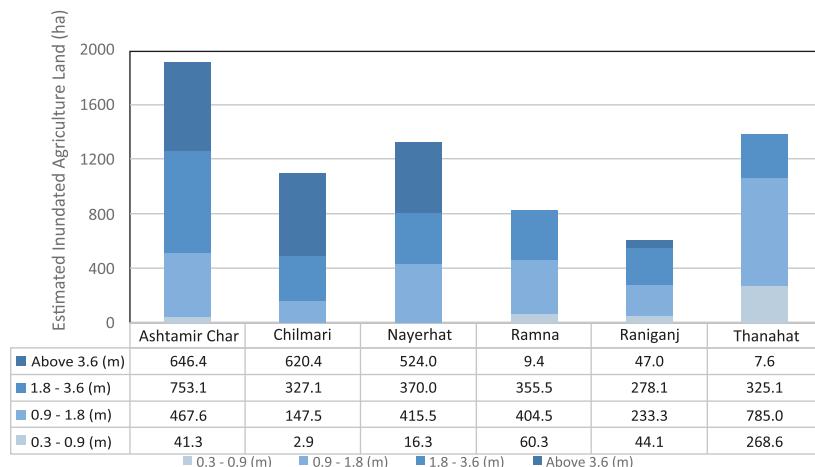

Figure 3-11. Inundated Area of the Paddy field by the flood of Chilmari Upazila

II. Damage estimation of the settlement area by flood

Figure 3-12 shows the spatial distribution of expected inundation areas with the settlement areas, and Figure 3-13 illustrates the estimated inundated areas of the settlement areas by union based on the calculated design flood level (24.38 MSL) at Chilmari station of BWDB. Comparing the affected settlement areas by union, Thanarhat has the largest areas (>650 ha), while the others range between 140 and 370 ha. However, settlements in unions like Ashtamir Char, Chilmari and Nayerhat are expected to be largely affected by deep inundation (>1.8 m), which is quite alarming to take into consideration for evacuation facilities. These unions are located in comparably lower elevation areas in dunes and thus are more prone to flooding.

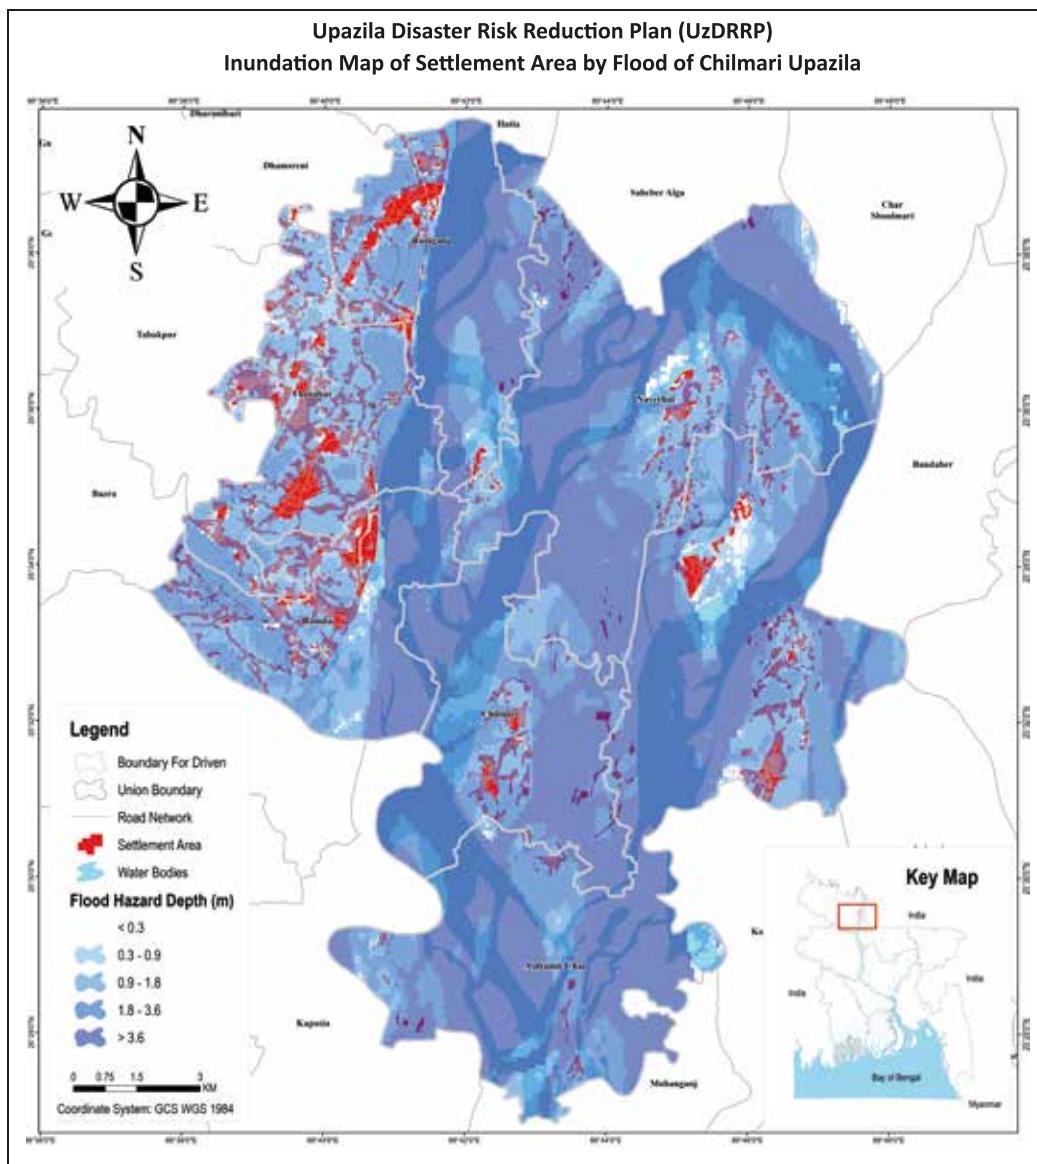

Figure 3-12. Inundated Settlement with danger water level of BWDB

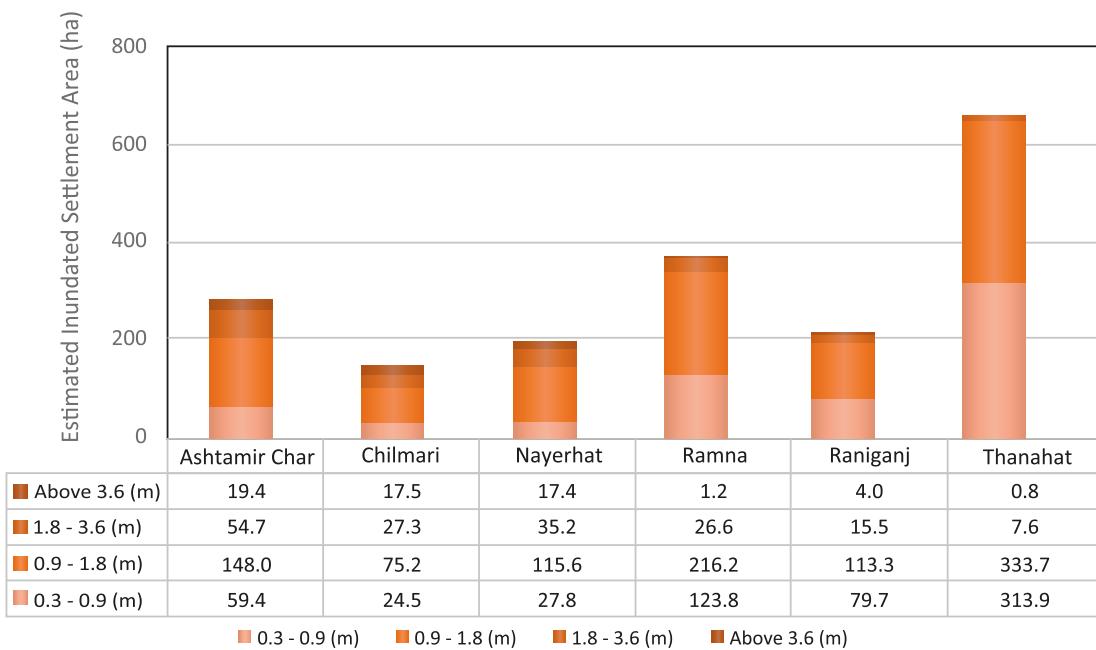

Figure 3-13. Inundated Area of Settlement at danger water level of Chilmari station of BWDB

II. Damage estimation of important facilities and infrastructures by flood

Figure 3-14, 3-15 and Table 3-4 illustrate the damage estimation of the important DRR-related facilities and infrastructures, namely roads and bridges, government offices, schools and shelters, and hospitals, in consideration of the disaster management and emergency operation. Roads are expected to be severely affected by flooding in all unions (>75% of road length), while the estimated flood damage to DRR-related public facilities is concentrated in four unions, which are Ashtamir, Chilmari, Nayerhat, and Ramna, at over 80%.

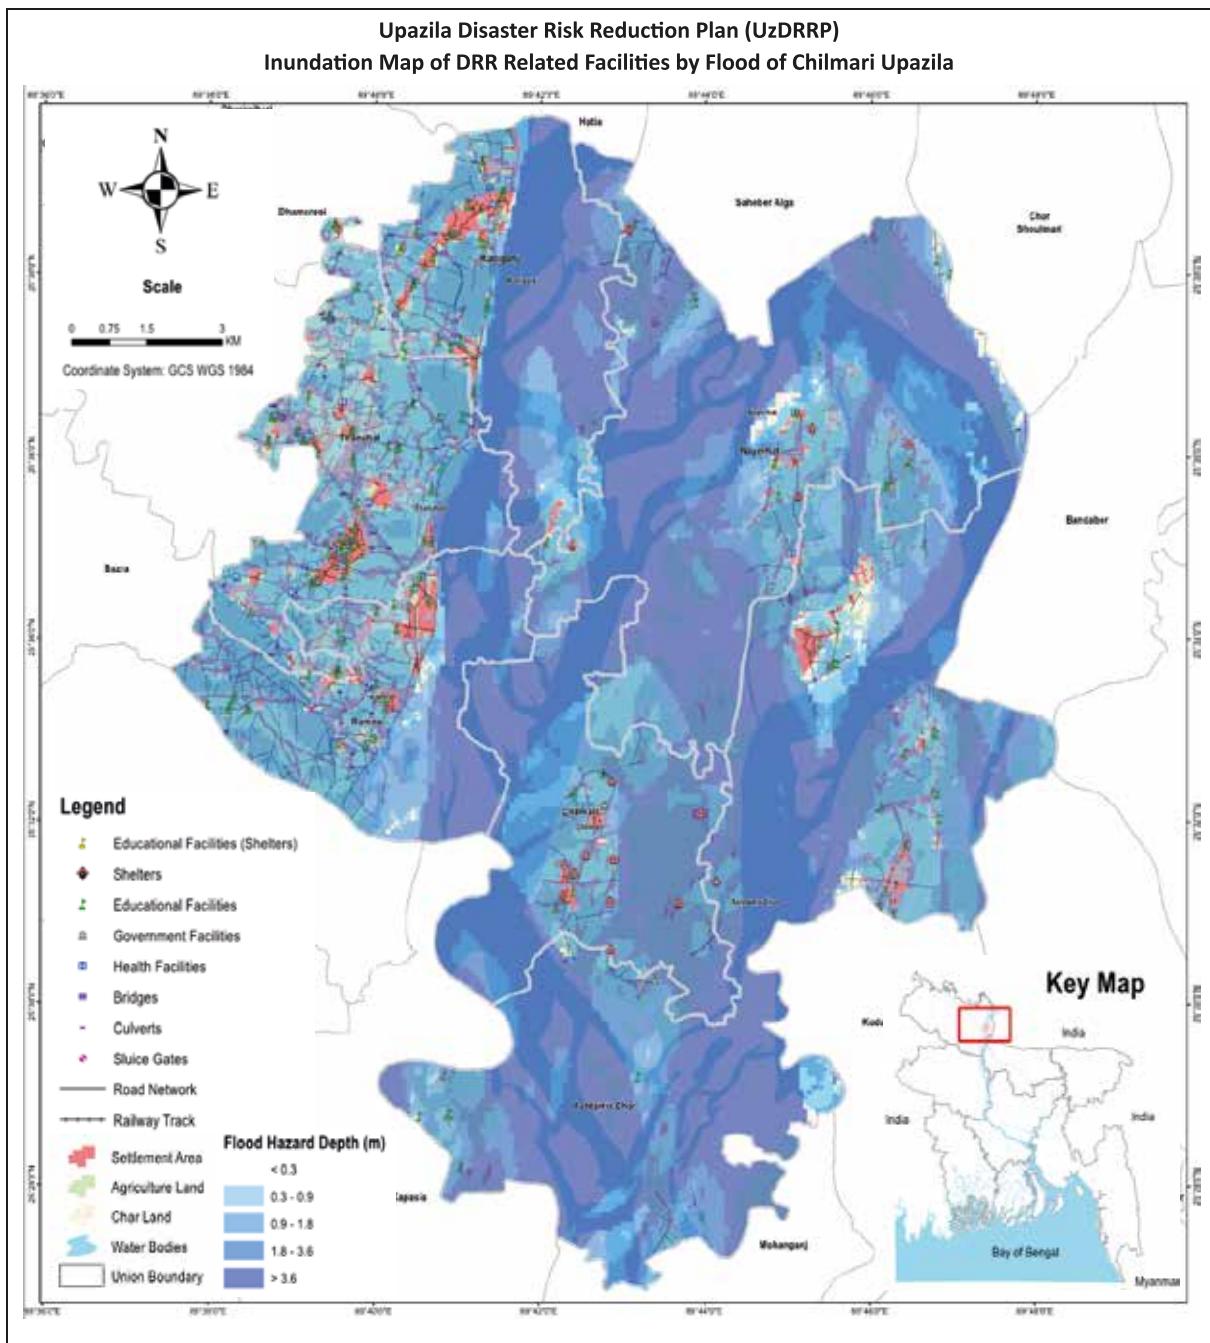

Figure 3-14. Inundated map of DRR-related facilities with danger water level by flood

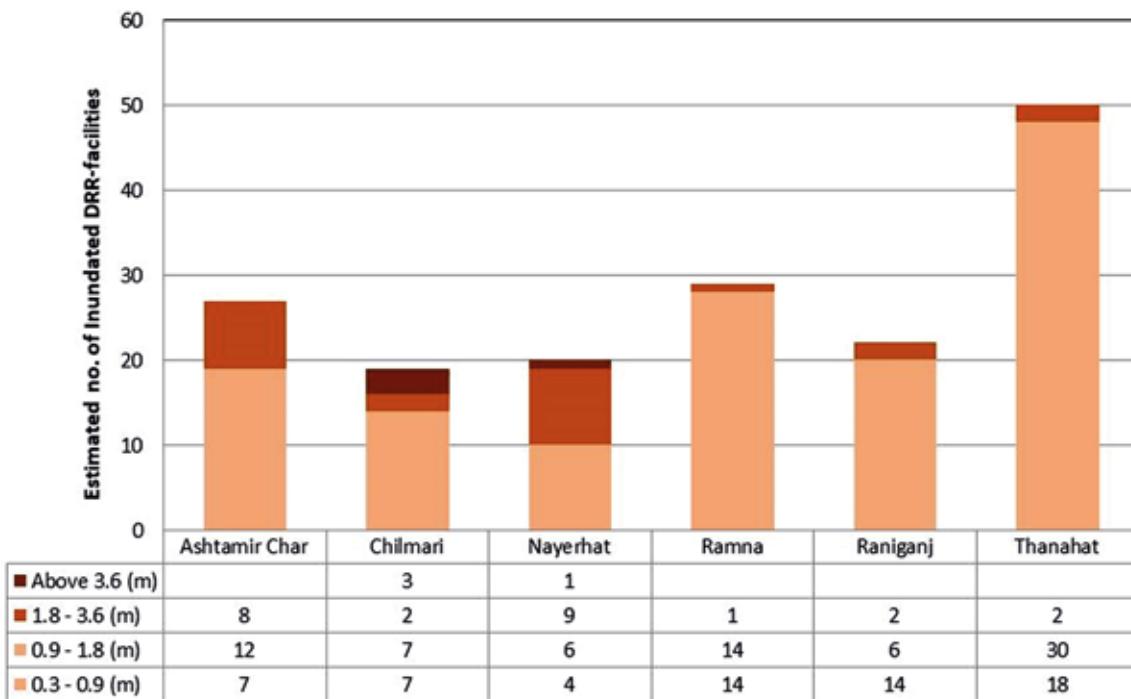

Figure 3-15. Inundated DRR-related facilities by flood in Chilmari Upazila

Table 3-4. Flood-affected facilities and infrastructure by Union

Union Name	Road Length (m)			DRR-related (important) facilities (no.)			(Reference) Bridges, Culverts and Sluice Gates		
	Total	Inundated ($\geq 0.3m$)	%	Total	Inundated ($\geq 0.3m$)	%	Total	Inundated ($\geq 0.3m$)	%
Ashtamir Char	32,009.8	24,865.9	77.7	30	27	90	3	2	66.7
Chilmari	19,332.7	17,700.6	91.6	19	19	100	1	1	100
Nayerhat	22,801.7	20,102.5	88.2	24	20	83.3	1	1	100
Ramna	99,130.1	90,133.5	91	36	29	80.6	18	15	83.3
Raniganj	48,219.9	36,636.5	76	41	22	53.7	15	12	80
Thanahat	131,365.4	114,388	87.1	92	50	54.3	36	36	100

3.3.2 River Erosion

(1) Hazard

Figure 3-16 shows the river erosion hazard map for Chilmari Upazila, using satellite images over the past years to identify the trends in riverbank erosion and then predict the risk areas during the next few years. Ashtamir Union is relatively at high risk of erosion, followed by Nayerhat, Chilmari, and Raniganj.

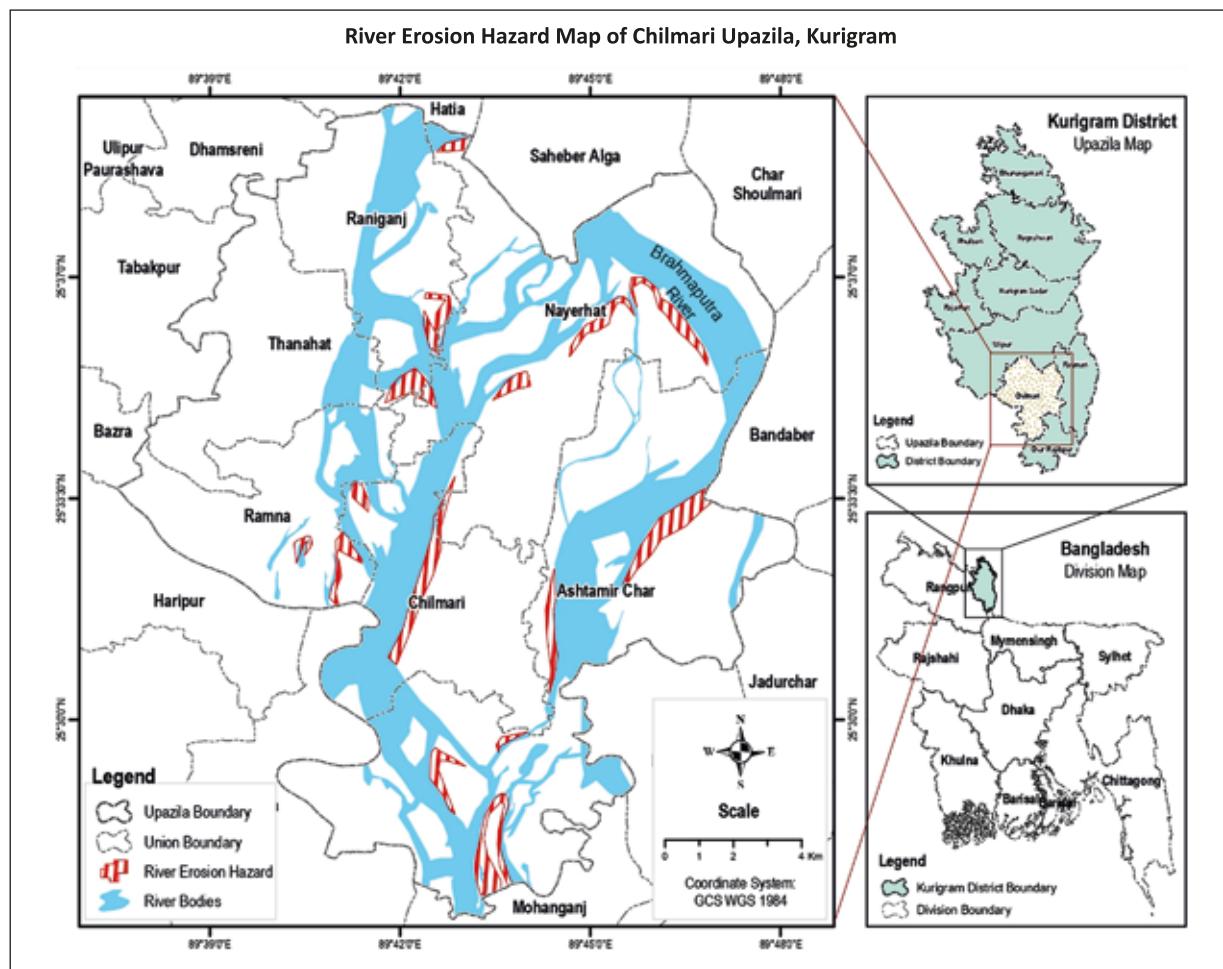

Figure 3-16. River erosion hazard map of Chilmari Upazila

(2) Disaster Risk

Among the unions in Chilmari Upazila, the settlement areas in Nayerhat are expected to be widely affected by river erosion. Approximately 34 ha of 162.1 ha (total settlement area) is predicted to be affected, equivalent to 16% of the area being eroded. Similarly, for agricultural land, in Chilmari union, 181 ha of 1935 ha (total agricultural land) will be affected by river erosion.

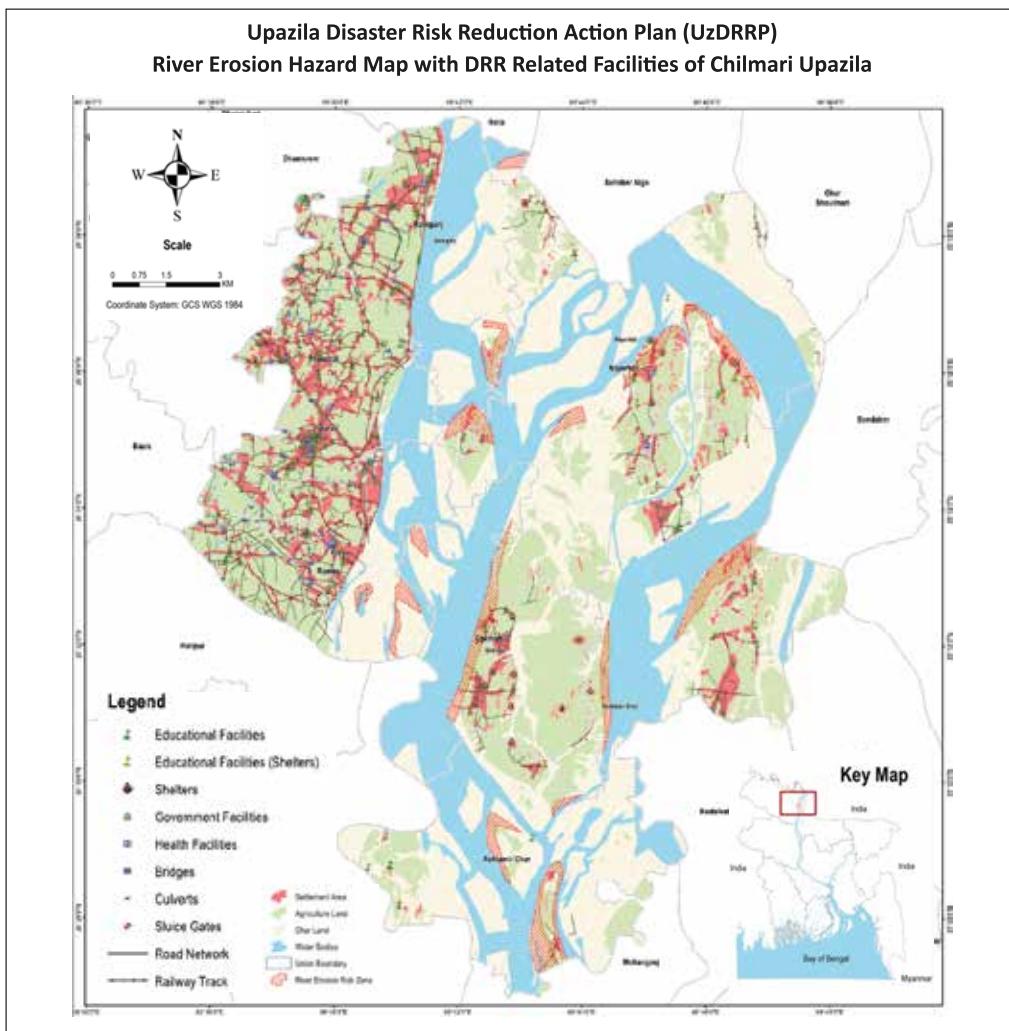

Figure 3-17. River erosion map with land use and DRR-related facilities of Chilmari Upazila

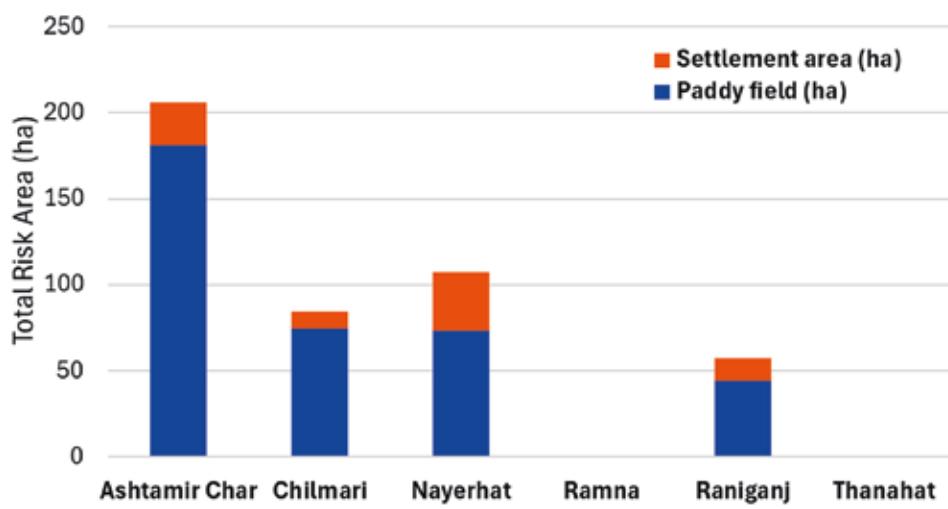

Figure 3-18. River erosion hazard risk on settlement areas and paddy fields in Chilmari

3.3.3 Earthquake Shaking

(1) Hazard

The earthquakes can be mainly caused by the collision of the Indian and Eurasian tectonic plates, which creates a complex fault system in the region. Figure 3-19 shows an average PGA (Peak Ground Acceleration on surface) of each union of Chilmari Upazila, which illustrates the earthquake shaking risk. According to this, the earthquake shaking risks of the unions of Nayerhat and Raniganj are relatively high.

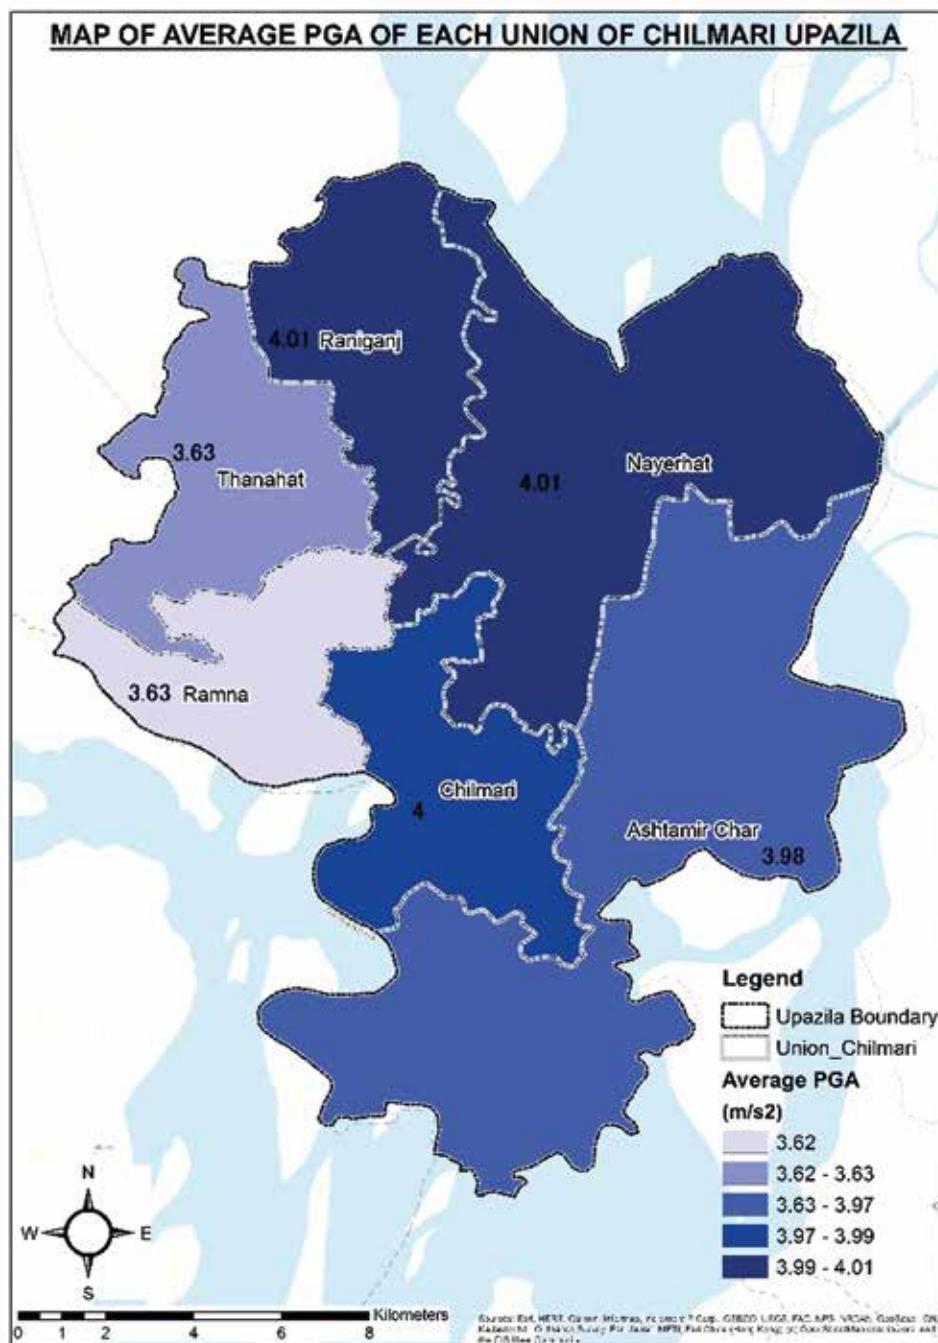

Figure 3-19. Average PGA of each Union of Chilmari Upazila

(2) Disaster Risk

The risk of earthquake shaking is high due to inadequate seismic resistant buildings in Chilmari Upazila. Figure 3-20, 3-21 and Table 3-5 show that Thanahat Union having the largest population in Chilmari Upazila, is expected to be most affected by the earthquake shaking, followed by Ramna and Raniganj Unions. The ratio of the affected households is the highest in Astamir Char, Chilmari and Nayerhat Unions (83%, Figure 3.18b). In general, the earthquake resistance measure is to strengthen the buildings.

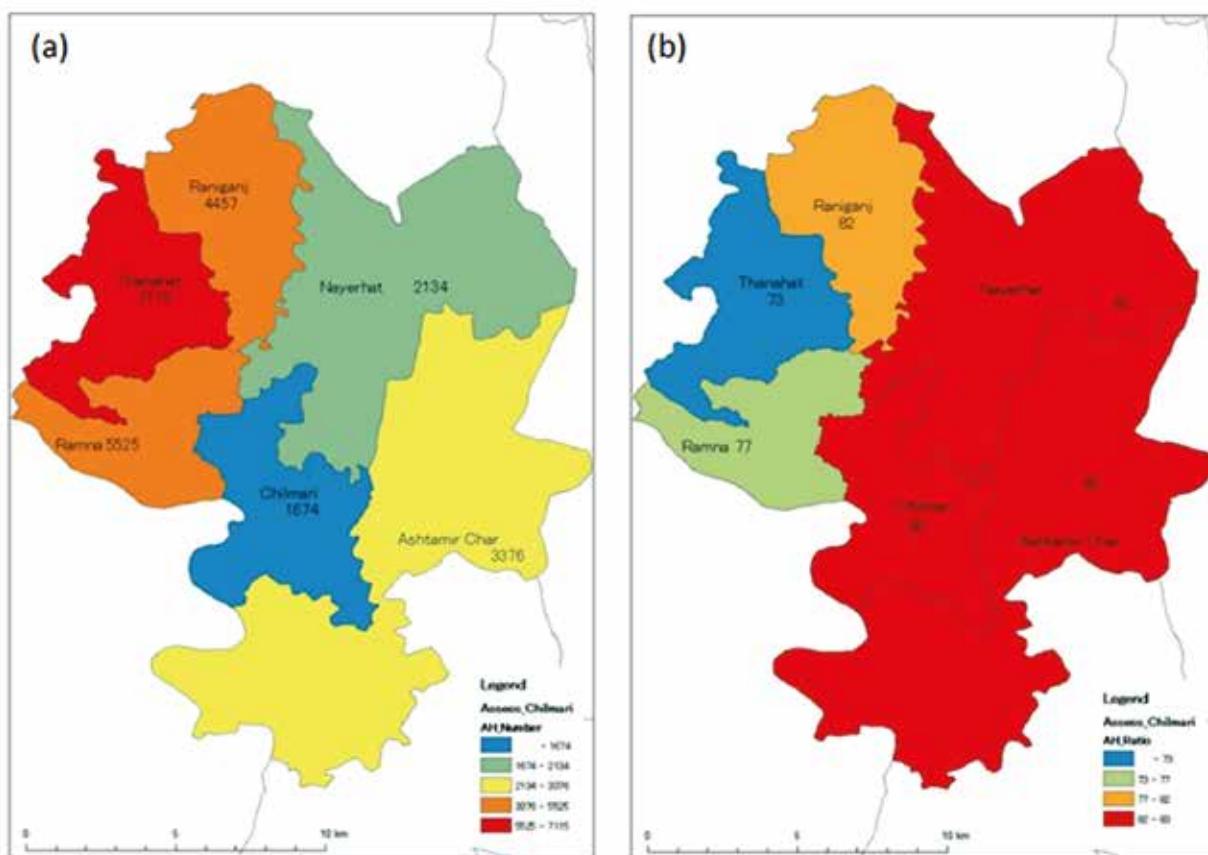

Figure 3-20. (a) Expected Number of Affected Households, (b) Expected ratio of affected households by earthquake shaking in Chilmari Upazila

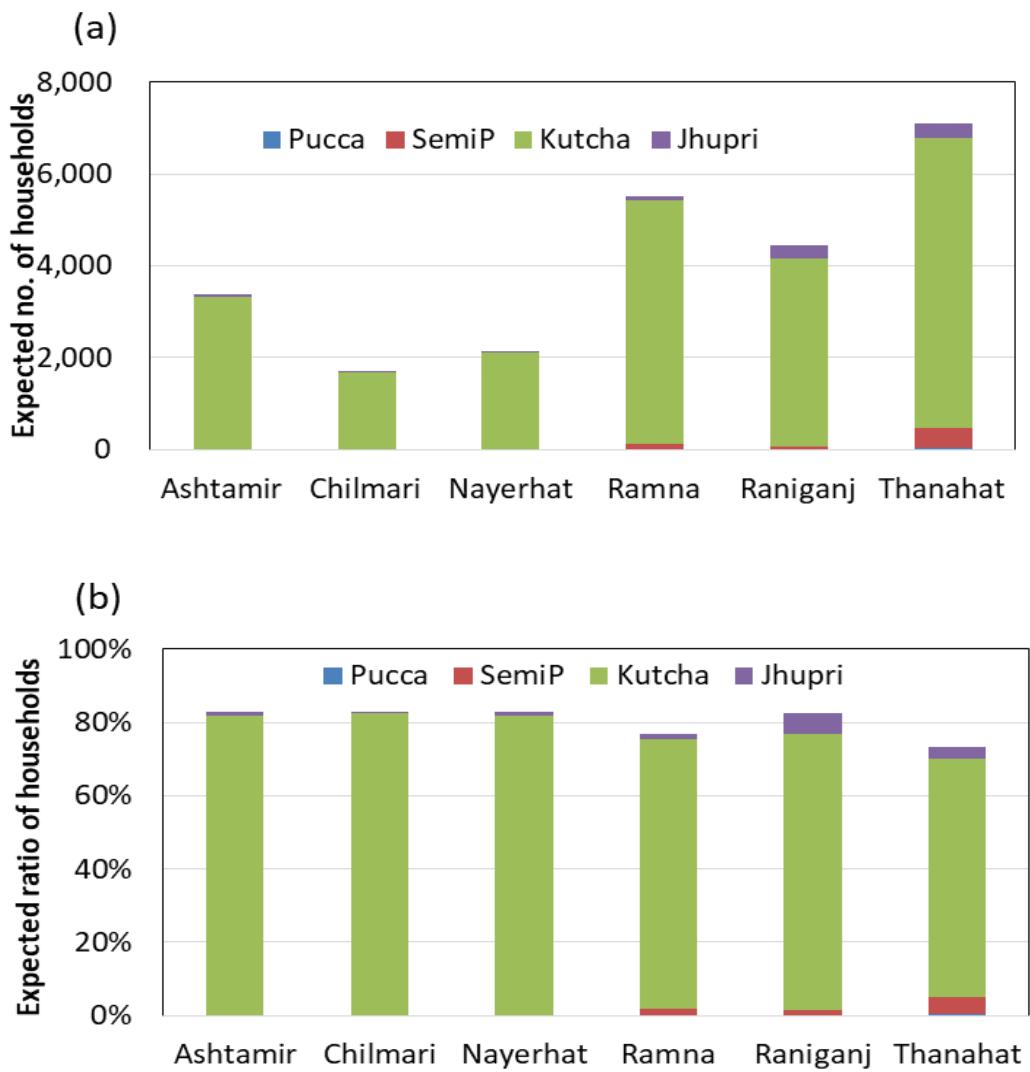

Figure 3-21. (a) Expected number of households, and (b) Expected ratio of households affected by earthquake in Chilmari Upazila

Table 3-5. Affected Household by Earthquake Shaking at Chilmari Upazila

Union	Expected No. of affected Household	Total Household (Census 2011)	Expected ratio of affected households (%)
Ashtamir Char	3376	4077	83%
Chilmari	1674	2024	83%
Nayerhat	2134	2574	83%
Ramna	5525	7188	77%
Raniganj	4457	5405	82%
Thanahat	7115	9698	73%

3.4 DRR Issues and Higher Risk Unions

3.4.1 Flood and waterlogging

(1) DRR Issues

The summary of the DRR issues given by the unions of Chilmari Upazila for flood is;

- Damage to roads and houses, and continued inundation
- Damage to crops and fields, and interruption of commercial activities
- Damage to livestock due to infectious diseases and feed shortages caused by flooding
- Disruption of the systems of education, transportation, and health
- Disruption of transportation networks after flooding

The summary of the DRR issues given by the unions of Chilmari Upazila for waterlogging is;

- Damage to crops and residential areas, resulting in reduced harvests and income, and food shortages for people and livestock
- Disruption of transportation networks due to waterlogging
- Outbreak of infectious diseases due to waste runoff and stagnation

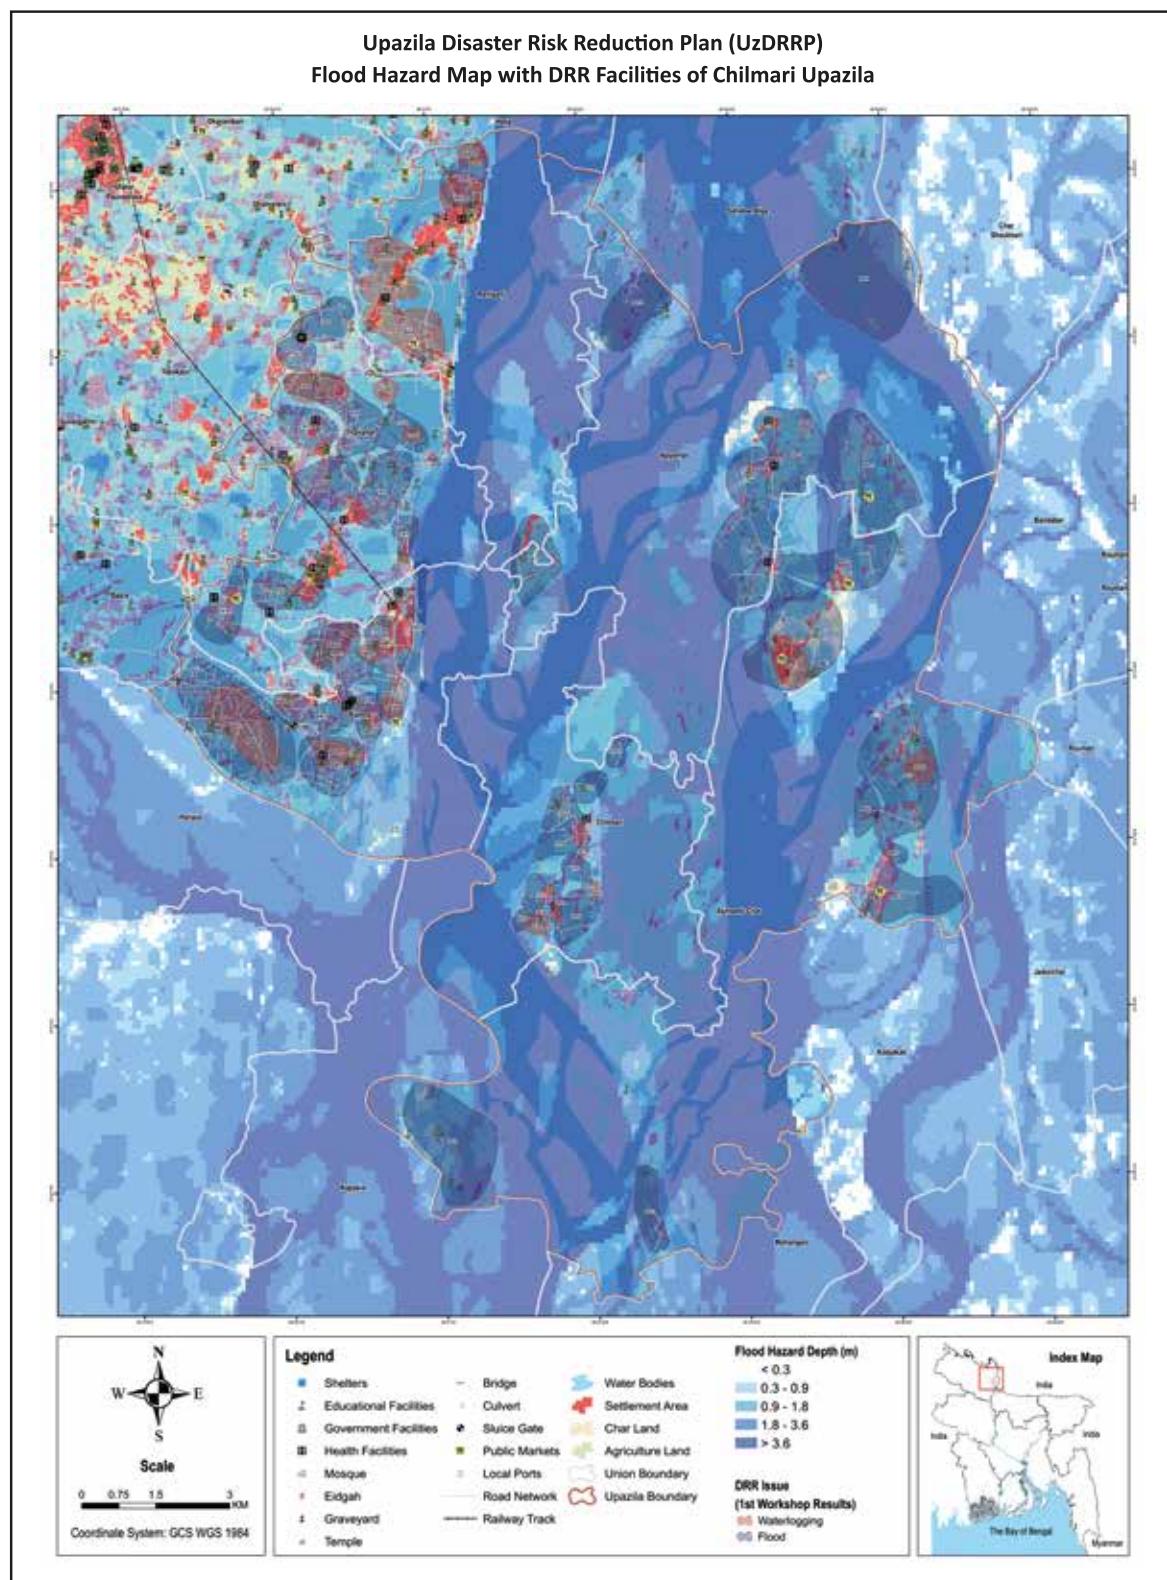

Figure 3-22. Flood hazard map with DRR issue in Chilmari Upazila

(2) Higher Risk Unions

Based on the scientific risk assessment results and DRR issues raised by the union parishad, the higher risk unions by flood were revealed as shown in Figure 3-23 and Table 3-6.

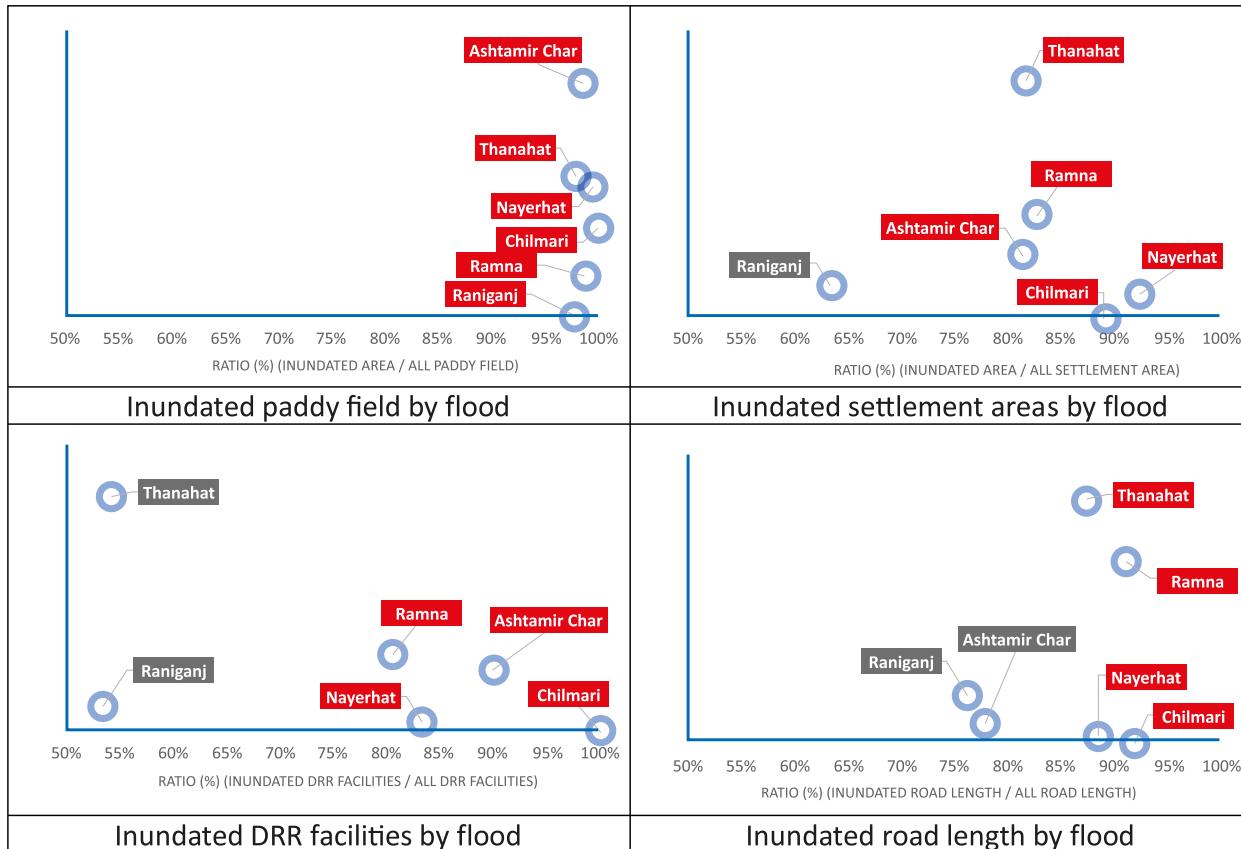

Figure 3-23. Higher risk unions for different disaster risks in Chilmari Upazila

Table 3-5. Affected Household by Earthquake Shaking at Chilmari Upazila

Issues	Higher risk union
Inundated paddy field	All Unions
Inundated settlement areas	Ashtamir Char, Chilmari, Nayarhat, Ramna, Thanahat
Inundated DRR facilities	Ashtamir Char, Chilmari, Nayarhat, Ramna
Inundated road length	Chilmari, Nayarhat, Ramna, Thanahat

3.4.2 River Erosion

(1) DRR Issues

The summary of the DRR issues given by the unions of Chilmari Upazila for river erosion is;

- Loss of houses, livestock housing, and farmland
- Loss and damage to educational facilities and schools
- Road collapses and resulting disruption of transportation systems

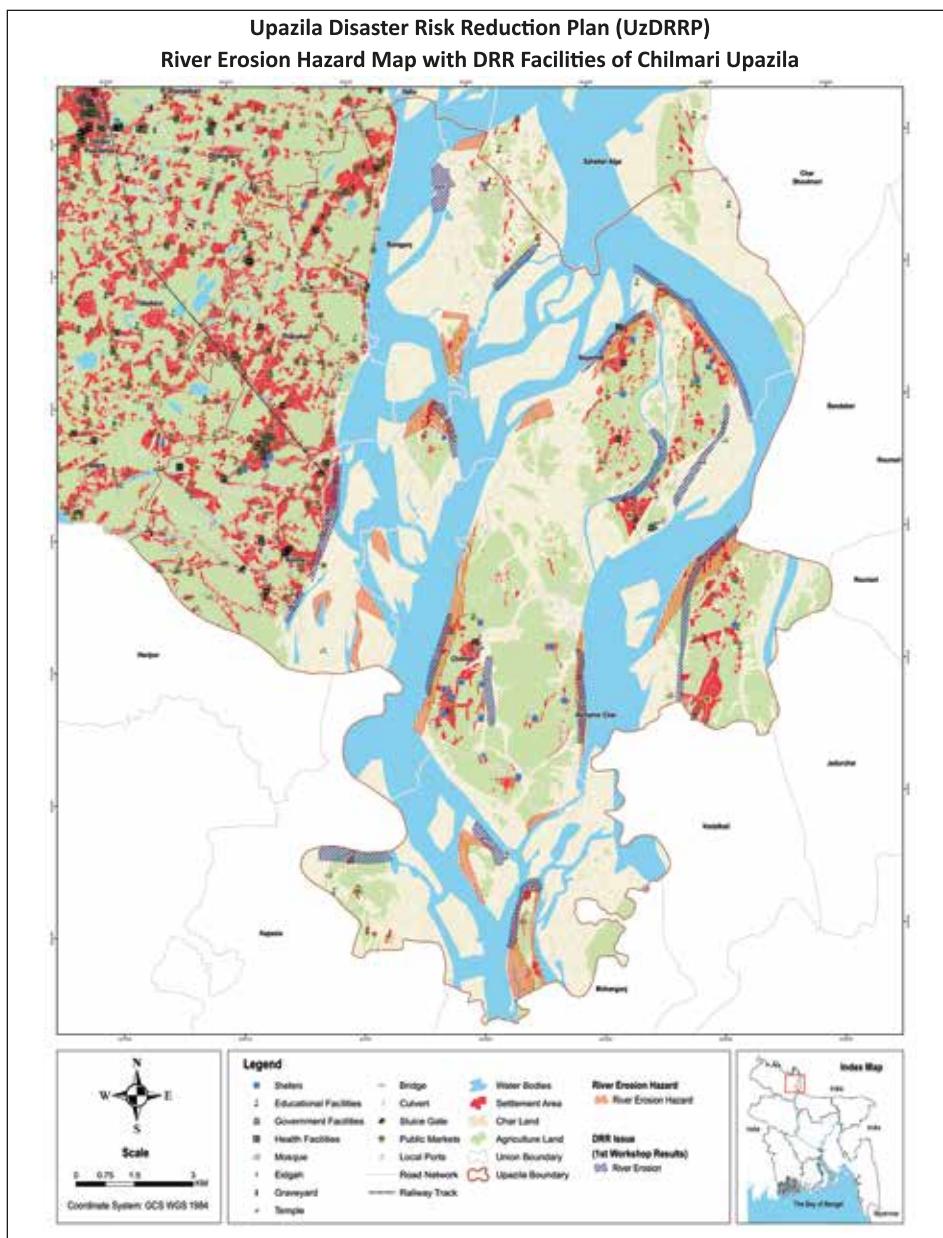

Figure 3-24. River erosion hazard map with DRR issue

(2) Higher Risk Unions

Based on the scientific risk assessment results and DRR issues raised by the union parishad, the higher risk unions by river erosion were **Ashtamir Char, Chilmari, Nayarhat and Raniganj**.

3.4.3 Others

The summary of the DRR issues given by the unions of Chilmari Upazila for other disasters is;

- Loss of life, livestock and injuries due to lightning strikes
- Damage to crops due to lightning strikes
- Reduction in crop production due to lack of water (for drought)
- Increased rearing costs and food shortages for people and livestock due to lack of adequate grass and feed (for drought)

Chapter-4. DRR Target of the Upazila

4.1 Vision

The estimated human and economic damages by each disaster will be reduced by 50% within 10 years (from 2025 to 2035).

4.2 Challenges by Hazard

In order to accomplish the above vision effectively with the limited budget and human resources, the following challenges were identified by hazard.

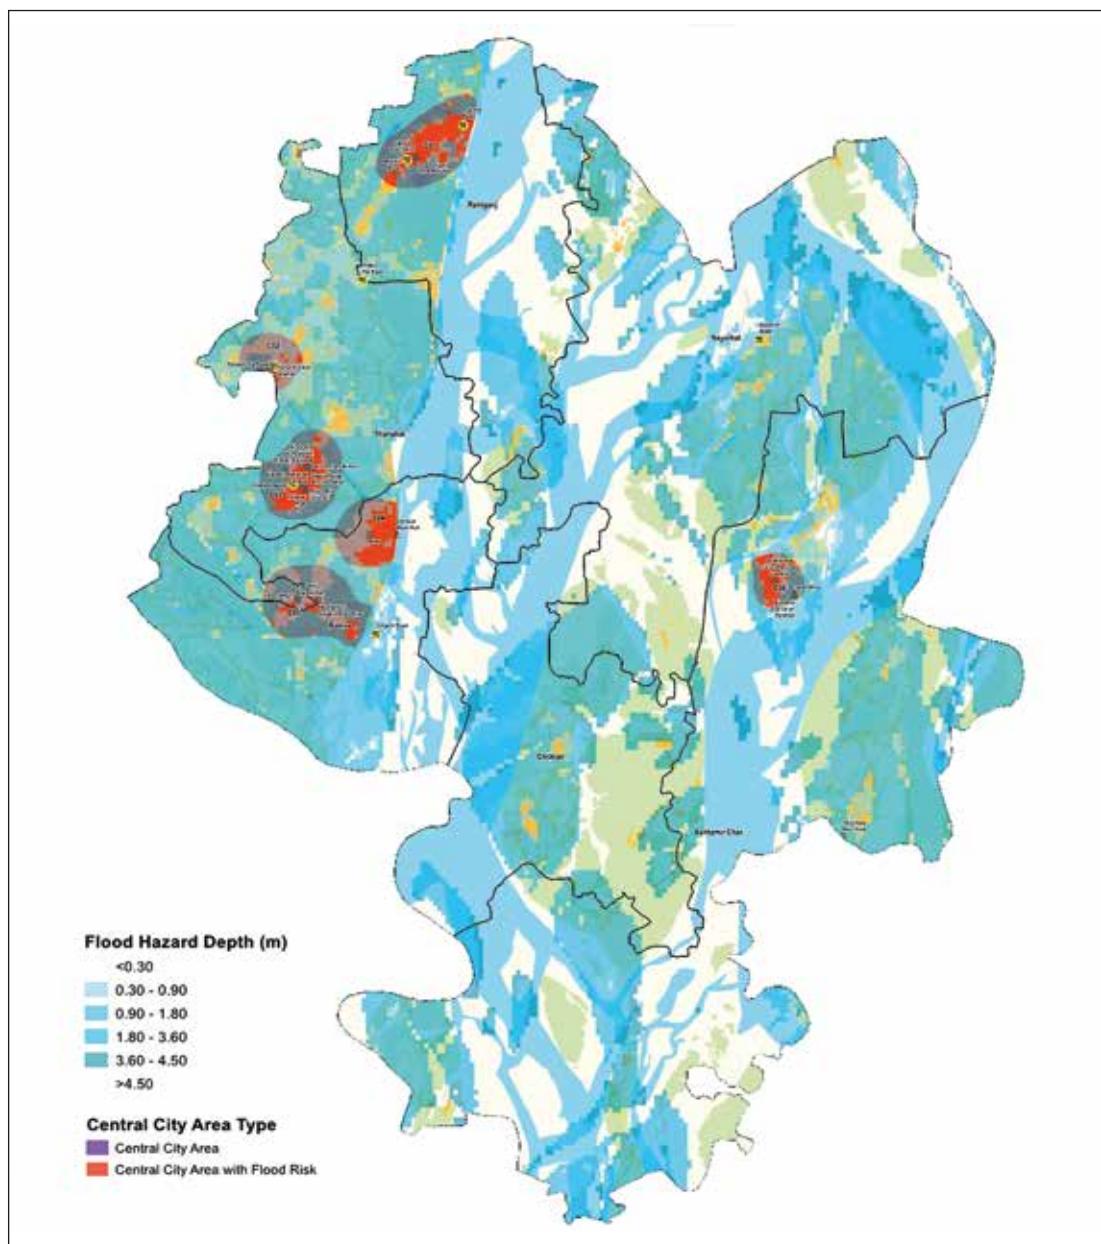

Hazard	Target Area	Challenges by Hazard (Countermeasures policy)	
		Short-to-Mid term	Long term
Flood	Inland area	<ul style="list-style-type: none"> Reduce at least the inundation risk of DRR-related facilities (e.g., government, medical care, education, and sanitation) and the central city areas* of the Upazila by improving flood control and drainage facilities and raising the land area of key facilities. Reduce damage to at least people and assets (e.g., property, livestock) and maintain transportation networks during flooding by improving evacuation systems and major roads. Ensure early evacuation through warning 	<ul style="list-style-type: none"> Reduce flood damage to the entire area by stormwater drainage facilities and flood control facilities
	Along river	<ul style="list-style-type: none"> Reduce at least the inundation risk of DRR-related facilities and the central city areas* of the Upazila by improving flood control in some priority areas and raising the land area of key facilities Reduce damage to at least people and assets (e.g., property, livestock) and maintain transportation networks during flooding by improving evacuation systems and major roads. Ensure early evacuation through warning 	<ul style="list-style-type: none"> Reduce flood damage to the entire area, including administration and commercial centers, key infrastructures, residential areas, and agricultural lands, by improving riverbank protection and land use along the river.
	Char area	<ul style="list-style-type: none"> Minimize damage to at least people and assets (property, livestock, etc.) and maintain transportation networks during flooding by improving evacuation systems and major roads. Ensure early evacuation through warning <p>*Flood control measures to protect the Char area has not been currently planned.</p>	<ul style="list-style-type: none"> Minimize flood damage to specific areas and facilities (e.g., residential areas, administrative and commercial centers and key DRR facilities) by land raising and land use improvements.

Hazard	Target Area	Challenges by Hazard (Countermeasures policy)	
		Short-to-Mid term	Long term
River Erosion	Along rivers	<ul style="list-style-type: none"> Urgently Control the progress of riverbank erosion by emergency measures at riverbanks and dredging in areas with recent significant erosion damage. 	<ul style="list-style-type: none"> Reduce the risk of riverbank erosion in the entire riverfront area through riverbank revetment and channel improvement, etc.
	Char area		<ul style="list-style-type: none"> Reduce the risk of riverbank erosion in administrative and commercial centers through emergency measures and dredging of revetments in some areas
Earthquake Shaking	All areas	<ul style="list-style-type: none"> Promote compliance with building standards and seismic diagnostics Raise awareness of earthquake risks and promote preparedness at home and in the community 	<ul style="list-style-type: none"> Ensure earthquake resilience of buildings and infrastructure through seismic retrofitting, and proactive measures such as redundancy and alternative measures of the infrastructure
Drought	All areas	<ul style="list-style-type: none"> Promote to expand and improve irrigation and water storage facilities to provide stable water to the fields and for livestock, and to convert to drought-resistant crops and agricultural methods. 	
Lightning	All areas	<ul style="list-style-type: none"> Reduce damage to human life and livestock by establishing and maintaining lightning arresters and evacuation shelters (people, livestock) Raise awareness of how to evacuate and cope with lightning strikes. 	
Common	All areas	<ul style="list-style-type: none"> Foster human resources through disaster management training and drills, as well as prepare material and equipment to enable rapid disaster response. Provide DRR education and public awareness raising to encourage citizens to appropriately understand the hazard risk and prepare for the evacuation and disaster response, regardless of ages or gender. 	

* **Notes: DRR-related facilities and the central city area:**

- DRR-related facilities:** the facilities where the government agencies and community leaders will use before, during, and after disasters for disaster preparedness and response.
- Central city area:** the areas with a specifically concentration of city markets, river ports, and government facilities in proximity to or within the settlement areas. These areas are referred to as the important areas in the Upazila in consideration of the DRR, and therefore should be protected in a priority manner. The following are the recognized areas in the Upazila.

Figure 4.1. Chilmari Central city area on the scientific flood hazard map

**Central city area list:**

- C01 Raniganj Central City Area**
- C02 Thanahat Central City Area**
- C03 Chilmari Central City Area**
- C04 Chilmari River Port Area**
- C05 Ramna Central City Area**
- C06 Ashtamir Char Central City Area**

*Red color areas have high inundation risks of flooding

Chapter-5. Action Plan of DRR Countermeasures

5.1 Current status of the general DRR Countermeasures in the Upazila

This Chapter explains the current status of general DRR-related countermeasures and the responsible agencies in the upazila by hazard.

5.1.1 Structural countermeasures against Flood and River Erosion

BWDB is making efforts to mitigate inundation and erosion through various types of countermeasures, including embankment construction, small canal excavation, and sluice gates, while drain constructions have been conducted by DPHE. Retarding basin and reservoir are not commonly applied, and there is no reservoir in the Upazila. In addition, BWDB constructed several dams in different areas of the Upazila to protect the paddy fields.

Type of Countermeasures	Current status	Responsible Agency
Embankments/Dike/Slope protection (incl. sandbags)	✓	BWDB
Canal excavation and other river improvements (Widening and Deepening)	✓	BWDB
Sluice gates	✓	BWDB/LGED
Retarding basin/Reservoir	Not undertaken	BWDB
Drainage facilities (Pumping Station , etc.)	Not undertaken	DPHE/BWDB/LGED
Rubber dam	✓	BWDB/LGED

5.1.2 Countermeasure against Earthquake Shaking

In this area, most of the building structures are low-rise. There is the Upazila Construction Committee, which is responsible for supervising the building standards (BNBC-2020) in the design and construction of urban and rural areas. This Upazila has some old building infrastructures. After the Building Assessment (Seismic diagnosis) conducted by PWD, if required, PWD can suggest retrofit⁸.

Type of Countermeasures	Current status	Responsible Agency
Compliance with the building standards (BNBC-2020)	✓	BCC/UzCC
Building Assessment (Seismic diagnosis)	Unknown	PWD
Seismic retrofitting of facilities and Infrastructures	Not undertaken	LGED/PWD
Drill and awareness training	✓	DDM/FSCD/NGO's

5.1.3 Countermeasure against Drought and Lightning

BWDB, BADC, and DPHE are making efforts to mitigate the drought through various types of countermeasures, like shallow tubewell, deep tubewell, channel excavation, irrigation projects, drinking water supply projects, etc. In the Char area, BADC has been providing the solar motor pump for irrigation

⁸ Retrofitting to cope with earthquake shaking is the process of modifying existing structures to make them more resistant to seismic activity, ground motion, or soil failure due to earthquakes

purposes. In this area, reservoirs are not commonly applied, and there is no reservoir in the Upazila. BADC has some programs for conversion to drought-resistant crops and agricultural methods. DDM has no lightning project in this Upazila.

Type of Countermeasures	Current status	Responsible Agency
Lightning arrester	Not undertaken	DDM
Well development	Not undertaken	DPHE/BADC
Reservoir	Not undertaken	DPHE/BADC
Repeat irrigation (e.g. pumps)	✓	BADC
Conversion to drought-resistant crops and agricultural methods	✓	BADC
Tree Plantation (Palm Tree)	Not undertaken	DDM/ Forest Department(FD)

5.1.4 Emergency Operations before, during, and after disasters

Shelter: **Mujib Killah** (2 in total) and Multipurpose Shelters like High School/College cum Shelter house (4 in total) are constructed by DDM and Primary school cum shelter house are constructed by LGED in this Upazila.

Transportation: LGED is the main responsible agency for developing and maintaining the listed road and transportation infrastructure. In addition, DDM also develops the HBB, CC road and Earthen road. In the Char areas, DDM develop the main connectivity in this upazila.

Drainage system: Improvement of the drainage system is important to prevent prolonged inland flooding and waterlogging. LGED and DPHE cope with the challenges of installing and rehabilitating drainage systems in urban and rural areas separately. There is no master plan for the drainage system in this Upazila.

Water and sanitation: Water and sanitation infrastructures are critical to provide safe water and maintain the living environment hygiene. DPHE is the main agency to cope with water-related issues to prevent the secondary effects of the disaster.

Type of Countermeasures	Current status	Responsible Agency
Shelters (incl. lightning shelter house) /Mujib Killah	✓	DDM/ LGED
Roads	✓	DDM/LGED
Bridges	✓	
Culverts	✓	
Drains	✓	DPHE/LGED
Facilities for Water (e.g., Tube well, Pipeline and sanitation]	✓	DPHE/NGOs

5.1.5 Non-structural Countermeasures against Disasters

(1) Land use planning

The urbanization control areas are supposed to restrict or regulate the development and conversion of land use, especially in the Char areas that are prone to floods, erosion and environmental degradation. However, the implementation and enforcement of the urbanization control in Kurigram are weak due to a lack of coordination among different agencies, political interference, population pressure, and poor awareness among the people.

To cope with this, it needs more vertical coordination and connection between governmental policy, district plan and strategy, and stakeholders in Union Parishads and Upazila administration. It's worth discussing in the UzSC continuously.

Type of Countermeasures	Current status	Responsible Agency
Urbanization control	Unknown	Upazila/UDD/DDM
Raising land area of specific facilities	✓	
Resettlement/Relocation	Unknown	
Designating special warning areas	Unknown	

(2) Early warning information and communications

The broadcasting system is utilized by BWDB, DRRO, and PIO. BWDB collects meteorological information through the line ministries. Mainly in the rainy season, DRRO, along with the PIO office, informs about rainfall and water level at the district level. The district office (DRRO) informs DDM and MoDMR of those issues.

Type of Countermeasures	Current status	Responsible Agency
Installation of the monitoring system for rainfall and/or water level	✓	BMD/BIWTA/BWDB/DDM
Flood forecasting and warning system, including community radio	✓	BWDB/ FFWC
Telecommunication system for search and rescue	✓	BTRC/DDM

(3) Disaster management training, drills and equipment

Disaster preparedness and response drills are conducted before the flood season. Regional evacuation drills are conducted once a year at the Union level. Disaster management training for UDMC members is conducted at least once a year.

Type of Countermeasures	Current status	Responsible Agency
Identification of evacuation routes	Unknown	UzDMC/UDMC/LGED/DDM/FSCD
Disaster response and/or evacuation drill	Unknown	DDM/FSCD/UzDMC
Preparation of SOP for emergency operation	Unknown	DDM/Donor
Inventory preparation on vulnerable infrastructure, such as hospitals, water wells, and schools, based on the risk map	Unknown	UDD/PWD/FSCD/DMC
Training on DRR, simulation and exercise	Unknown	DDM/FSCD
Preparation of equipment for emergency operation	✓	DDM/FSCD/ DGHS

(4) Raising public awareness and disaster education

Disaster education is provided irregularly in both primary and secondary school classes. Awareness raising for disaster risk reduction is mainly conducted through TV and Radio, however, in some areas, NGOs conduct courtyard meetings, simulations, drills, etc. when support by donors is available.

Several unions have emergency disaster preparedness equipment and emergency warehouses for stockpiled materials in the event of a disaster, and they are not functioning well due to a lack of coordination.

Type of Countermeasures	Current status	Responsible Agency
Publication of hazard maps and DRR educational materials	Unknown	DDM
Disaster preparedness education in school	✓	DoPE/DoEE
Awareness-rising activities on disasters to the public	✓	DDM
DRR awareness-related billboard and signs	✓	DDM/NGOs

5.2 Action Plan in line with the DRR Target (Short-to-mid-term)

This Chapter describes the structures of the Action plan aiming at the achievement of the Vision (see Chapter 4), and Action plans in short to mid-term under the Programs in the upazila.

Vision	Target hazard	Challenges by Hazard		
		Policies	Programs	Target area
The estimated human and economic damages by each disaster are reduced by 50% within 10 years (from 2025 to 2035).	1. Flood: To ensure protection of human lives and properties (livestock) from flooding	1-1. Reduce at least inundation risks of DRR-related facilities and Central city areas	A. Improvement of flood control facilities in some priority areas B. Improvement of drainage facilities in some priority areas C. Raising of land area of key facilities/ Relocation to elevation areas	Inland areas, areas along rivers
		1-2. Reduce/minimize damage to at least people and assets by improving evacuation systems and maintaining transportation networks	A. Construction and maintenance (incl. raising lands) of multi-purpose shelters B. Improvement and renovation of major roads, bridges, and culverts for evacuation and emergency operations	Inland areas, areas along rivers, Char areas
		1-3. Ensure early evacuation through warning	A. Development and operation of early warning networks	
	2. River Erosion: To mitigate direct damage to residence and properties against river erosion	2-1. Urgently control the progress of riverbank erosion by emergency measures	A. Introduction of emergency measures (e.g., sandbags) for revetment, and dredging	Areas with recent significant erosion damage along rivers
	3. Earthquake Shaking: To establish a resilient Upazila to withstand earthquakes	3-1. Enhance earthquake resistance	A. Promotion of compliance with the building standard (BNBC 2020) B. Implementation of the seismic diagnosis	All areas
		3-2. Promote earthquake preparedness at home and in the community	A. Awareness raising of earthquake risks and preparedness at home, schools, and communities	All areas

Vision	Target hazard	Challenges by Hazard		
		Policies	Programs	Target area
	4. Lightning: To reduce direct damage to people and livestock caused by lightning strikes	4-1. Promote appropriate response and evacuation for lightning strikes	A. Installation and maintenance of lightning arresters / evacuation shelters for people and livestock	All areas
	5. Drought: To mitigate the impact of drought on people and livestock	5-1. Provide stable water supply for the fields and livestock	A. Expansion and improvement of irrigation facilities (e.g., pumps, well development) / water storage facilities (e.g., reservoir)	All areas
		5-2. Promote drought-resistant crops and agricultural methods	A. Conversion and/or introduction of drought-resistant crops and agricultural methods	All areas
	6. Common: To build communities capable of quick and appropriate disaster response	6-1. Foster human resources and prepare equipment to enable rapid disaster response	A. Implementation of disaster management training and drills	All areas
			B. Preparedness of the materials and equipment for disaster response	All areas
		6-2. Encourage people to prepare for the evacuation and disaster response	A. Provide DRR education and public awareness raising activities	All areas

Figure 5-1. Structure of the Action Plan

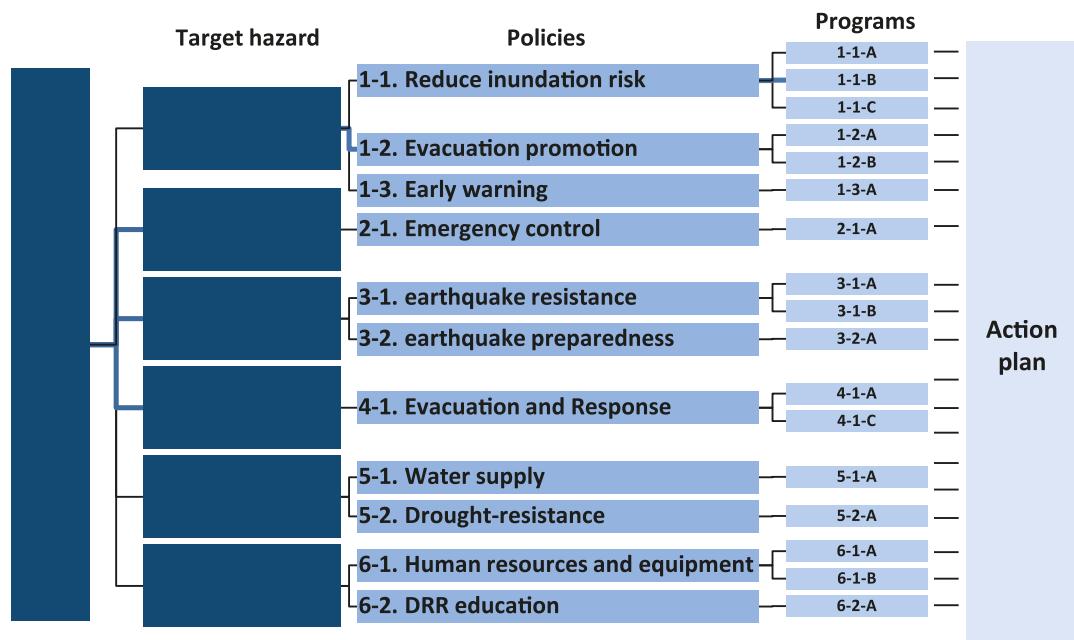

Figure 5-2. Structure of the Action Plan

Figure 5-3. Map of the Action plan for Chilmari Upazila

1. Flood: To ensure protection of human lives and properties from flooding

The target area borders large rivers and is particularly affected by flood damage. Therefore, the challenges for flood hazards are prioritized to minimize human and property damage, as well as to mitigate flood risk and inland waterlogging.

Priority targets in the target area include flood risk reduction, enhanced drainage functions, and human and property damage reduction, including the development of evacuation systems.

Specific measures to reduce flood risks and enhance drainage include the following.

- Improvement of flood control facilities along rivers and in inland areas
- Improvement of drainage facilities in inland areas
- Raising of land area of key facilities

In addition, the following efforts will be prioritized to mitigate human and property damage

- Construction and maintenance of multi-purpose shelters
- Improvement and renovation of major roads, bridges, and culverts for evacuation and emergency operations
- Development and operation of early warning networks

1-1 Reduce at least inundation risks of DRR-related facilities and central city areas

ID	1-1-A
Program	Improvement of flood control facilities in some priority areas
Target area	Inland areas, areas along rivers
Action	Action
Responsible agency	Ongoing activity/Current status
Implementation plan	Actions to be taken
Timeframe for achieving the Action	
Action along the Teesta River	
1) Riverbank protection works on the left bank of the Teesta River [Second priority] Revetment work (13.550 km)	BWDB DPP has not been submitted.
	Securing the fund (4,000 million TK)
	6 years
Action along the Jamuna and Brahmaputra River	
2) Riverbank protection works on the right bank of Jamuna and Brahmaputra River [First priority] Revetment work from Ranigaji to Ramna (16.2km) (Both in Chilmari and Uipur) Protection work from Nayachar to Old Brahmaputra Offtake (17.5 km)	BWDB On-going project, Some portion has been completed
	Continue the project
	Completion in 2025
Action and Implementation plan	
3) Riverbank protection works on the left bank of Jamuna and Brahmaputra River Protection work from Nayachar to Old Brahmaputra Offtake (17.5 km)	BWDB DPP has not been submitted.
	Securing the fund
	6 years
4) Riverbank protection works on the left bank of Jamuna and Brahmaputra River Protection work from Shaheber Alga BGB Camp to Bolodmari Ghat (13 km)	BWDB DPP has not been submitted.
	Securing the fund
	6 years
5) Dredging the river on regular basis to maintain Navigation route for national and international (along the Dhara river, Jamuna River and Brahmaputra River) (*This work is not along the river but inside the river)	BIWTA Regular maintenance work
	Securing Regular fund
	Continuous work
Remarks	In Chilmari Upazila, embankment or river protection in the Char area was proposed by the Unions. However, in the Char area, BWDB doesn't have any plans for permanent embankment installation in the Char area because it is out of the BWDB's working scope. Due to some technical or engineering limitations, permanent embankment installation is not considered in the Char Area. Therefore, the local government may take the initiative to install temporary embankments, which are described in Program ID 2-1-A. Along the Tista River, BWDB has the plan to install an embankment and revetment, but there were no proposals from the Unions. Along the Jamuna and Brahmaputra Rivers, BWDB has a plan for a project, as shown above, where the proposals from the Union (IDs AS-R2-1 and NA-F4-9) can be recovered.

ID	1-1-B	Implementation plan				
Program	Improvement of drainage facilities in some priority areas	Action	Responsible agency	Ongoing activity/Current status	Actions to be taken	Timeline for achieving the Action
Target area	Inland areas					
Action and Implementation plan	1) Canal excavation to reduce waterlogging in 3 locations of Raniganj union of Chilmari Upazila	BWDB	Consideration of local needs All the proposed areas are located on private land, and this area has no discharge path	UzSC and UDMC need to find a feasible solution. As a reference for Shalmara low land purpose feasible solution is in Action ID 1-1-B-3.	10 years	
	2) Preparation of Master Plan for the drainage system in the city area, Chilmari Upazila (Detailed design)	LGED	No drainage in the central city area	UzSC and UDMC need to prepare a drainage master plan and take necessary measures to improve the drainage system.	10 years	
	3) Canal excavation to reduce waterlogging in Raniganj area at Shalmara lowland in Ward no 01 (RAN-W1-1)	DDM	This area has no discharge path	Install new box culverts on Fakirerhat Ghat to Achar as a house road DPP enlisting	3 years	
Remarks	<p>The actions reflect the Union's proposal IDs RAN-W1-1, RAN-W2-1, and RAN-W3-1. These proposals are related to canal excavation. To cope with the issues, instead of canal development, DDM proposed action 1-1-B-3. The above canal excavation proposals are on private land, therefore, the land needs to be acquired by the government. This action will be further considered in the future master plan of LGED.</p> <p>The criteria for selecting projects for the improvement of drainage facilities are :</p> <ul style="list-style-type: none"> - Technically feasible outfall selection. - Connected or linked with a waterlogging area. - Linked with other primary, secondary and tertiary drains. <p>Obstacle: BWDB is considering the above canal excavations that were also proposed by unions in Chilmari and Ulipur, however, these countermeasures have not been done yet since most of the proposals are located on private lands .</p>					

ID	1-1-C
Program	Raising of the land area of key facilities/ Relocation to elevation areas
Target area	Inland areas, areas along rivers
Action and Implementation plan	Action
	<p>Action</p> <p>Responsible agency</p> <p>Ongoing activity/Current status</p>
	<p>1) Raising the High school fields (AS-F2-13) with school infrastructure development work</p> <p>2) Deep tube well development (Raising the platform of the tube well facilities) (Inland area) to supply safe drinking water in Ramna, Raniganj and Thanahat Union</p> <p>3) Improve shallow tube well (Char) to supply safe drinking water</p> <p>4) Improvement of Fakirer Hat rural market by land uplifting</p>
Implementation plan	<p>Actions to be taken</p> <p>Timeframe for achieving the Action</p>
	<p>Enlisting DDP</p> <p>Urgent 3 years</p> <p>Need detailed design The platform of existing tube wells is vulnerable to flooding. (79 deep tube wells have been inundated during the last flood)</p> <p>Only shallow tube wells are available, In char area, without riverbank protection deep tube well is not possible to be installed.</p> <p>The existing market is on low-lying land and lacks drainage. It is very important economically, but it does not operate during heavy rain and floods.</p> <p>Riverbank protection so as to be able to install deep tube well</p> <p>Improve by Raising the land with drainage facilities</p> <p>Long term</p>
Remarks	<p>Solution for TH-F5-5 (inundation in the school area in Thanahat) is covered by program ID 1-2-A</p> <p>Solution for TH-W2-1, TH-W3-1 (inundation of the residential area) is not feasible to be addressed due to lack of space</p> <p>Since AS-F5-3 is private institution land , it is out of scope for government agencies. This can be solved by NGOs or local arrangements.</p> <p>AS-F2-13 is a high priority project , since it is in the central city of the Char area and works as a Multi -purpose Shelter while it is vulnerable. Therefore, the timeframe was set within 3 years.</p> <p>IDs NA-F4-8, RAM-F4-11, RAM-F4-6 (sanitation facilities) will be covered by program 1-2-A</p> <p>For IDs AS-F1-8, AS-F2-12, AS-F2-14 (inundation of graveyards), UDMC members may select the specific sections within the proposed graveyard that need to be raised and that will be only used during flooding for burials. All proposed locations are in the Char area, which should be solved by local arrangements</p>

1-2 Reduce/minimize damage to at least people and assets by improving evacuation systems and maintaining transportation networks

ID	1-2-A			
Program	Construction and maintenance (incl. raising lands) of multi-purpose shelters			
Target area	Inland areas, areas along rivers, and Char areas			
Action	Implementation plan			
Responsible agency	Ongoing activity/Current status

		Ongoing activity/Current status	Actions to be taken		
6) Extension of existing buildings to be multi -purpose shelters (along the river and inland) [Priority shelters to be constructed] <ul style="list-style-type: none"> • Existing Primary schools • Near the Union office in central city area The shelter to be constructed is/are located at <ul style="list-style-type: none"> ➤ Radhaballab Kalir Path Govt Primary school ➤ Mozaidanga Govt. Primary School ➤ Adhikaripara Govt. Primary School ➤ Balabari hut 2 no Govt. Primary School ➤ Rajarvita Govt. Primary School 	LGED Existing Primary schools	Existing Primary schools	Ditto	10 years	
7) Activate and strengthen the capacity of shelter (school) management committee	DDM supported by NGOs	At this moment, there is no activity.	Provide practical training on shelter maintenance to the committee members with the support of NGOs	Long term	

Program ID 1-2-A-1 and 1-2-A-4 are reflected in the union proposal for the Char area . In the implementation period of this multipurpose Shelter house, DDM and LGED will consider the Char design.

Multi-purpose shelter selection Criteria of priority action are as follows:

- Avoid private land
- Avoid areas that can be impacted by riverbank erosion
- Near the central city area
- Existing good infrastructure

Multi-purpose shelter construction purpose necessary coordination:

- DDM/PIO needs to communicate with EED , which manages colleges and high schools
 - LGED needs to communicate with EED , which manages primary schools.
- The total number of affected people by flood was 121,826 in 2020 in Chilmari Upazila according to the D-form. On the other hand, the combined capacity of the shelter houses is currently 10,282 people. Thus, there is a need to increase the capacity of shelter houses by approx. 110,000 people that is accommodated by the plan above .

Remarks

2. River Erosion: To mitigate direct damage to residence and properties against river erosion

This area is located upstream of the confluence of the Teesta and Jamuna Rivers and has been severely affected by large-scale river channel transitions and riverbank erosion. As risk reduction measures, emergency measures against riverbank erosion and dredging to control the erosion progression in the affected areas and the central city areas are important challenges.

In addition, revetment and channel rehabilitation to reduce the risk of erosion along the river are also important efforts in the area.

Specific measures include the introduction of emergency measures for revetment and dredging. Through these measures, flood damage will be reduced.

2-1 Urgently control the progress of riverbank erosion by emergency measures

ID	Implementation plan			
Program	Introduction of emergency measures (e.g., sandbags) for revetment, and dredging			
Target area	Areas with recent significant erosion damage along rivers			
Action and Implementation plan	Action	Responsible agency	Ongoing activity/Current status	Actions to be taken
1)	Placing Sandbags/Geo-bags as an emergency operation to ease the impact of riverbank erosion,	BWDB	Ongoing Activity by O&M budget in Kurigram district, but no activity in Chilmari Upazila	Securing budget
2)	Protection Work for river erosion in the Char area by Sandbags/Geo-bags	Local Government Agency, LGED and DDM	No regular activities	Securing budget
Remarks	<p>Program 1-1-A for the Jamna riverbank contributes to preventing riverbank erosion to some extent.</p> <p>Program 2-1-A2 reflects union proposals that are related to the embankment or protection works at the Char area. Reflecting to the Union's proposal ID NA-R1-1, NA-R1-2, NA-R2-1, CH-R1-1, CH-R2-1, AS-R1-1, AS-R1-2, AS-R1-3, RAN-R1-1, NA-F4-10.</p> <p>DDM and LGED have proposed budget allocation to the upazila -level offices to provide emergency support to prevent erosion by installing temporary protection.</p>			

3. Earthquake Shaking: To establish a resilient Upazila to withstand earthquakes

The risk of earthquake shaking disasters is a common issue in all areas. It is important to strengthen the earthquake resistance of buildings and infrastructure against earthquakes, as well as to raise awareness and understanding of earthquake risk and preparedness in local communities.

Specific measures to strengthen earthquake resistance include promoting compliance with building standards and seismic diagnostics.

In addition, to promote earthquake preparedness in local communities, priority is given to implementing projects aimed at raising awareness of earthquake risk and earthquake preparedness among households, schools, and local communities.

4. Lightning: To reduce direct damage to people and livestock caused by lightning strikes

The risk of lightning disasters is common throughout the target area. Mitigating the impact on human lives and livestock is an important issue, requiring the installation of lightning arresters and the implementation of awareness-raising activities.

As countermeasures against lightning disasters, priority is given to the protection of human lives and livestock through the installation and maintenance of lightning arresters and shelters within the union, as well as the implementation of educational programs on how to evacuate in case of lightning damage within union and what to do in the event of a lightning strike.

5. Drought: To mitigate the impact of drought on people and livestock

The risk of drought disasters is a common challenge throughout the area. A stable water supply for fields and livestock is a key issue.

Priority measures include expanding and improving irrigation and water storage facilities, shifting to drought-resistant crops, and promoting changes in agricultural practices.

Specific initiatives include the development of irrigation capacity in the Char areas and inland areas to mitigate economic losses due to drought, the development of deep wells and supply networks in rural and urban areas of Upazila to ensure a safe drinking water supply, and conversion projects to drought-resistant crops and agricultural methods.

6. Common: To build communities capable of quick and appropriate disaster response

In common with risks from all disaster types, human resource development, disaster risk reduction education, and public awareness raising are important issues for disaster risk reduction.

To enable rapid disaster response, it is necessary to develop specialized human resources through the provision of materials and equipment, and disaster risk reduction training.

In addition, to ensure that citizens of all ages and genders have an appropriate understanding of disaster risks and prepare to take evacuation actions and respond to disasters appropriately, priority should be given to disaster risk reduction education and the implementation of training programs aimed at raising public awareness.

3. Earthquake Shaking: To establish a resilient Upazila to withstand earthquakes

3-1. Enhance earthquake resistance

ID	3-1-A			
Program	A. Promotion of compliance with the building standard (BNBC 2020)			
Target area	All areas			
Action and Implementation plan	<p>Action</p> <p>Promotion of compliance with the building standard (BNBC 2020)</p> <ul style="list-style-type: none"> - Training program - Evaluation & Monitoring 			
Remarks	No proposal from the Union Parishads and line agencies			
Action	Responsible agency	Ongoing activity/Current status	Implementation plan	Timeframe for achieving the Action
Promotion of compliance with the building standard (BNBC 2020)	PWD	No project for promotion against earthquakes by the line-agencies and communities so far	To develop a promotion program	10 years

ID	3-1-B			
Program	B. Implementation of the seismic diagnosis			
Target area	All areas			
Action and Implementation plan	<p>Action</p> <p>Implementation of the seismic diagnosis and infrastructure retrofitting</p>			
Remarks	<p>No proposal from the Union Parishads</p> <p>Identification and retrofitting of existing important facilities based on seismic diagnosis are required for schools, hospitals, shelters, and infrastructure such as bridges, roads, embankments/dykes for saving lives and evacuation during and after the earthquakes.</p>			
Action	Responsible agency	Ongoing activity/Current status	Implementation plan	Timeframe for achieving the Action
Implementation of the seismic diagnosis and infrastructure retrofitting	PWD/L/GIS	No project for seismic diagnosis by the line ministries and communities	To develop a diagnosis plan by PWD, including a training, diagnosis, retrofitting, implementation plan	10 years

3-2 Promote earthquake preparedness at home and in the community

ID	3-2-A	Implementation plan			
Action and Implementation plan	Action	Responsible agency	Ongoing activity/Current status	Actions to be taken	Timeframe for achieving the Action
Awareness raising for earthquake preparedness in all Unions	DDM	No program	Awareness-raising activity program contents must be prepared	Long project., 10 years	term
Remarks					No proposal from the Union Parishads, proposed by DDM - Awareness raising program for the people of the Paurashava and Union on the construction of earthquake-resilient infrastructure. - Awareness raising program for BCC, Upazila, and Paurashava Building Approval Committee, regarding ensuring the Building Code, different acts, and rules by capacity building of the code enforcement committee.

4. Lightning: To reduce direct damage to people and livestock caused by lightning strikes

4-1 Promote appropriate response and evacuation for lightning strikes

ID	4-1-A	Implementation plan			
Action and Implementation plan	Action	Responsible agency	Ongoing activity/Current status	Actions to be taken	Timeframe for achieving the Action
1) Installation and maintenance of lightning arresters / evacuation shelters for people and livestock	Install lightning arrester in all Unions	DDM	No arresters	Install in the existing shelters, Based on the capacity, install them in all unions	10 years
2) Construction of lightning-safe shelters for farmers	Construction of lightning-safe shelters for farmers	DDM	No Shelter	Prepare a typical economic design and drawings considering less use of agricultural land, which can be implemented by NGOs/CBOs/Local Government Agencies with technical assistance from DDM.	3 years
Remarks					Proposal by DDM in respect of the union proposals - Based on the capacity parameters of the lightning arrester device need to fix the installation location in each area. - Categorical tree plantation with the consideration of all potential hazards by the Ministry of Environment, NGO, LGIs

5. Drought: To mitigate the impact of drought on people and livestock

5-1 Provide stable water supply for the fields and livestock

Target area	Action	Implementation plan			Timeframe for achieving the Action
		Responsible agency	Ongoing activity/Current status	Actions to be taken	
Action and Implementation plan	1) Irrigation capacity development to reduce the economic loss from drought in the Char area	BADC	20 solar pumps have been installed	Fund request to provide 120 Solar pumps for the Char area of Chilmari, along with Ulipur Upazila	5 years
	2) Irrigation capacity development in the Char area	BADC	Fixed pumps are installed	<ul style="list-style-type: none"> - Procure the portable solar pumps - Provide portable & solar pumps to avoid riverbank erosion in the Char area, as well as coping with the electric shortages to reduce the economic loss from drought 	5 years
	3) Irrigation capacity development to reduce the economic loss from drought in the Inland area	BADC	Surface and groundwater management Irrigation System Modernization	Securing O&M budget	Continuous work
	4) Construction of a Sluice gate for reducing economic losses by supporting irrigation	LGED	Surface water management Irrigation System Modernization	Securing budget	5 years
Remarks	<p>Programs 5-1-1 and 5-1-2 were proposed by BADC, instead of the union parishes of the Char areas. Program 5-1-3 was proposed by BADC.</p> <p>There was no proposal from the union.</p> <p>Countermeasure to reflect the Union's proposal ID CH-F5-1 and CH-F6-1 is the sluice gate infrastructure shown as the above Action 4).</p> <p>Based on the discussion with the line agencies, the construction criteria for these sluice gates match with the LGED work fram e.</p>				

5-2 Promote drought-resistant crops and agricultural methods

ID	5-2-A	Conversion and/or introduction of the drought-resistant crops and agricultural methods				
Program	All areas	Action	Responsible agency	Ongoing activity/Current status	Actions to be taken	Timeframe for achieving the Action
Action and Implementation plan	Conversion and/or introduction of drought-resistant crops and agricultural methods	BADC	Already introduced	Enlarge the project scale to all areas in Upazila		Continuous work
Remarks	Proposed by BADC not union parishads					

6. Common: To build communities capable of quick and appropriate disaster response

6-1. Foster human resources and prepare equipment to enable rapid disaster response

Remarks	No proposals from Unions										

5.3 Monitoring and Updating of the Plan

For appropriate implementation of the projects by project implementing agencies, this plan is to be monitored and updated by UzDMC and DDMC, with the support of DDM and the Focal Point Operational Coordination Group (FPOCG; a group to advise coordination of DMC activities and provide recommendations for future actions at the central level, defined in SoD), in the following steps.

Step 1: Monthly Monitoring by UzDMC

The UzDMC reviews the status of each Action in Chapter 5.2 in the monthly Upazila Development Coordination Meeting, specifically “Ongoing activity/Current status”, with reference to the typical steps of the project implementation below, and report it to DDMC. Findings are recorded and shared with DDMC.

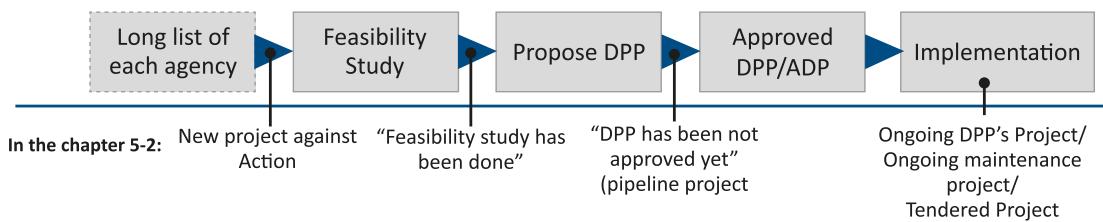

Figure 5-3. Typical Steps for reviewing the Current Implementation Status⁹

Notes:

The figure above illustrates typical steps for structural countermeasures like roads and embankments. However, the exact project flow varies significantly depending on the specific project's requirements. Consequently, this general flow won't always be directly applicable to every situation.

Step 2: Consolidation by DDMC

DDMC compiles reports from UzDMCs, summarizes progress and key issues through a Monthly Development Coordination Meeting of the District, and prepares and submits a brief to DDM. DDM then compiles the reports, summarizes the progress and gaps in project implementation, and organizes information for discussion in FPOCG.

Step 3: Quarterly FPOCG Review and Coordination

FPOCG reviews and discusses the DDMC's inputs presented by DDM.

This discussion includes:

- Highlighting projects facing delays in DPP processing
- Identifying coordination needs (e.g., between road improvement and drainage system design)
- Notifying relevant stakeholders about missing feasibility studies or land acquisition issues as well as their budgets

⁹ **Ongoing DPP’s Project/Tendered Project:** Those projects/Schemes are listed in DPP. Project funds come from ADP/Annual Budget/development partners. This type of project requires F/S and DPP approval. “Ongoing” in this context refers to projects that are currently in the implementation stage or have completed the tendering process.

Ongoing Maintenance Project: These projects or schemes are included in a specific maintenance list and receive annual approval as part of the Annual Development Plan (ADP). Unlike DPP projects, these do not require a Feasibility Study.

Step 4: Information Sharing and Dialogue

FPOCG shares the discussion results with MoDMR, implementing agencies, specifically their respective planning units, for taking necessary actions for implementation by them. Feedback is also provided to DDMCs, who are encouraged to follow up with UzDMCs and local line agencies.

Step 5: Recommendation to Review the Plan

If significant issues or changes are identified, DDM recommends DDMC to suggest reviewing the plan, based on the discussion in FPOCG. DDMC informs UzDMC for further action.

Step 6: Plan Updating and Documentation

UzDMC updates this UzDRRAP if needed, with DDMC validation. Updates are shared with DDM and FPOCG for record and continued monitoring.

The conceptual model for monitoring and updating this plan is shown below.

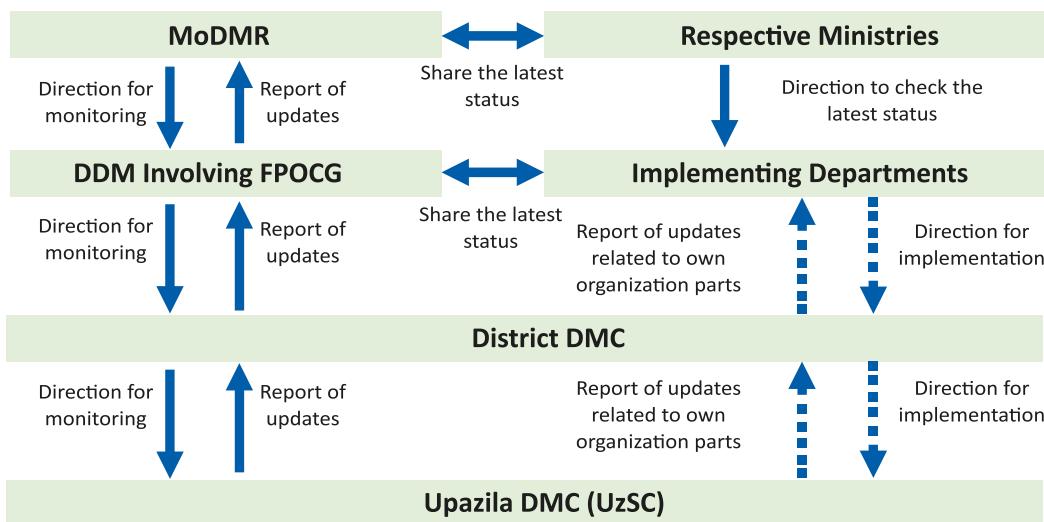

Figure 5-4. Conceptual diagram for monitoring and updating the plan
